I feel strongly that the state should make solar and other renewable energy the top priority. Duke Energy can still make plenty of money installing and maintaining this grid. Every rooftop should have a solar panel! They should buy back the excess just as they buy natural gas or coal to produce it.

Message

Climate Change is here now. It is destroying peoples lives, doing tremendous damage, and insurance rates will continue to rise dramatically as a result. We must invest much more in solar and wind, and STOP investing in coal, oil & gas for our energy production. Please make sure Duke Energy is doing it's part.

Message

NC Utilities Commission, North Carolina is past due for a shift in the profit-driven monopoly mindset that increasingly harms communities, drives up power bills, and makes the climate crisis worse. Many experts agree that local solar-plus-storage is the best tool we have to address the climate crisis. It is clear that the only way North Carolina can finally get aligned with the climate scientists is to rapidly expand local solar. All Duke Energy's residential, commercial and nonprofit customers can share in the costs and benefits of local solar much like we currently pay for polluting power plants – through the electric rate system.

North Carolina needs Solar & Wind Energy! It's the wave of the future, the right thing to do for a lot of reasons like forging a better and more sustainable world for our children and grandchildren, and not least, creates a lot of excellent business and entrepreneurial opportunities for tradespeople and local businesses with the State. It's also, all things considered, cheaper or price-competitive with coal and gas, on a straight dollars per kilowatt basis, over the long run.

As a resident and bill payer, I object to using natural gas in this day. It is obvious the world's climate system is running towards Hothouse Earth! We must convert to renewables like solar, hydro, and wind backed up by batteries. Burnt gas is killing the planet gradually, while leaked gas is obliterating it quickly. Please talk to the experts who do the work for you, like Citizens Climate Lobby. The days of denial are over.

Message

It's way past time to invest in renewable energy. It's what people want and need. Profiting from pollution is unacceptable and hugely unfair to everyone suffering from climate change -- heat waves, droughts, floods, increased storm intensity, all of it. Behave responsibly!
