re Duke Energy gas expansion

Please ensure an *open review* ... **no fast track**. A full and transparent examination of the Asheville gas-fired power plant. Require the company to address the concerns of technical experts.

Attorney General Mr Cooper

Please use your policing authority over Duke Energy's corporate influence.

best,
David Armstrong

As full-time residents of North Carolina concerned with the cost of energy and impacts to the environment, we wish to emphasize our thoughts regarding Duke Energy's plans for expanding power production and distribution in western NC. A more careful examination of future power needs, modes and sources of production and distribution, and a strategic reduction on the reliance on carbon-based fuels is both warranted and essential. Further, rather than constructing and operating new CO2-emitting power plants, strong consideration should be given to utilizing currently available excess electrical power from South Carolina, while concurrently planning and moving to more sustainable sources. As voters, we expect nothing less. Thank you.

Dear Members of NC Utility Commission,

I have contacted you to submit my statement of position for the record regarding Duke Energy Progress' project for a gas-fired facility at Lake Julian in Buncombe County (Docket # E-2 Sub 1089).

I ask that you deny approval of the third natural gas unit that Duke has included in the plan as an optional unit. It would be prudent to wait to approve until it is determined that the optional unit is necessary.

Also, I request that Duke Energy Progress includes in its application a commitment to solar installation at its facility. The company has said it has an intention but it has not included it in the current plan under consideration by your Commission.

My concern is that the current plan for the facility at Lake Julian commits the area to a future dependent on fossil fuels.

Sincerely yours,
Grace Curry
