Message

It would be really decent for DUKE to finally do something to help the environment instead of leaving their destructive sludge for taxpayer to clean up while the CEO's reap even bigger and bigger profits. Shame on Duke

Message

I am urging you to stop Duke Energy's climate-wrecking actions. Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!

NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions.

I am concerned that Duke Energy's proposed plan focuses too heavily on the continued use of fossil fuels and will not meet the Governor's goals to reduce greenhouse gas emissions. Any new fossil fuel plants will remain in operation for decades. If Duke invests in clean energy, we could have more reliable energy and lower energy bills. A more balanced and forward-thinking plan should be expected.

NC Utilities Commission, Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!

Get away from the fossil fuels. They will run out eventually and now is the time to switch to renewable energy production. There is something called thorium to use in nuclear reactors with no toxic byproducts

I am horrified that Duke Energy is trying to build a highly polluting plant that depends on fossil fuels. We should be installing Solar Energy EVERYWHERE and we are in the perfect environment to receive abundant free non polluting energy from the SUN ☉ PLEASE do not allow this misguided plan to move forward and waste our resources and money so unethically. Thank You.

E-100 Sub 190

Message

NC Utilities Commission, United Nations Secretary-General António Guterres said recently that world leaders must quickly find “an exit ramp off the highway to climate hell.” Despite the horrifying weather disasters pummeling civilization this summer, Duke leaders plan to greatly expand their use of fossil fuels, gamble our future on high-risk and super-costly transmission and failed nuclear technologies, and suppress clean energy climate solutions. That’s ridiculously scary. There is no chance of North Carolina helping avoid Guterres’ “climate hell” without a rapid and large expansion of local solar-plus-storage. We need to stop using fossil fuels. Period.

E-100 Sub 190

Message

NC Utilities Commission, North Carolina is past due for a shift in the profit-driven monopoly mindset that increasingly harms communities, drives up power bills, and makes the climate crisis worse. Many experts agree that local solar-plus-storage is the best tool we have to address the climate crisis. It is clear that the only way North Carolina can finally get aligned with the climate scientists is to rapidly expand local solar. All Duke Energy's residential, commercial and nonprofit customers can share in the costs and benefits of local solar much like we currently pay for polluting power plants – through the electric rate system.

I am writing to urge you to work with advocates and organizations to save our environment by adopting more solar panels and continuing to create financial incentives to do so. It seems you're blocking progress for our children and our children's children. That is not what this area (and country) needs right now at this crucial. Get on board with Sharing Solar proposal.

Message

I am a Duke Energy customer residing in Charlotte, NC. I am writing to NCUC to let you know that I want Duke Energy to ditch building more polluting fossil gas plants and to retire coal immediately. Last Sunday was the hottest day on record. It makes no sense to continue using and building fossil fuel plants. Instead I want Duke Energy to invest in affordable and carbon free renewable energy such as wind and solar power. Thank you for allowing me to comment on this matter.
