Please no fracking gas power plants and no gas storage tanks. Please no air pollution and no water pollution. Only rooftop solar and offshore wind clean electricity and clean environment for our children and grandchildren. I believe North Carolina, and Duke Energy can give us clean energy not dirty old fossil fuels. Thank You

Message

NC Utilities Commission, Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!

NC WARN has a well-researched plan to counter Duke Energy's proposal. Please help individual homeowners like my husband and I get solar panels on our roof. We've explored it in the past, and with Duke's current restrictions it's not affordable for us. There are much better solutions than Duke's to address the climate crisis. I fully support the NC Warn proposal and hope you will too. Thank you for your consideration.

E-100 Sub 190

Message

NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions.

Please support alternative energy sources and prevent Duke Energy from thwarting safer solutions like solar. My energy bill goes up when Duke Energy spends more money on its polluting energy sources. The rate structure encourages Duke Energy to spend more than they have to.

If you are really FOR the people like you claim then you will allow the people access and the right to rooftop solar and reject Duke Energy's plans to thwart it. You are supposed to be making life better and cheaper for your constituents.

Please allow citizens of North Carolina the freedom to contribute to their communities with solar power. Duke is trying to shut out citizens. Duke is putting a new meaning to monopoly!! Duke has continued to raise rates on people to enable to buy back stock and pay executives salaries out of line for 90% for the people who they profess to serve. SAY NO TO DUKE PROPOSALS.

We have had rooftop solar panels and battery back-up on our home for 5 years. We have enjoyed the lower electric bills (monthly average = \$50) compared to our former electric bill (monthly average = \$140). Plus we also enjoy the ability to have electric power any time Duke Power is interrupted due to whatever. I cannot understand why Duke Power and the NC Utilities Commission are so against solar energy when it has been proven effective in replacing dirty energy derived from fossil fuels. I understand Duke is making a killing off of its customers and barely even trying to move into the 21st Century by incorporating large-scale solar, but enough is enough. "We the People" have had enough of corporate greed and we will do whatever it takes to help ourselves save money and make our lives easier by demanding and using renewable energy in our lives even as Duke and the NC Utilities Commission are trying their best to stop us. Thank you for your time.

I live in a downtown and have worked in RTP for decades - surrounded in both places by large flat roofs! I support Shared Solar and would LOVE to be sharing the generation of solar-based electricity from all these blank surfaces. It makes such easy sense! Let's do it.

Recent studies claim that distributed solar plus storage is the cheapest way to go. At the very least, it seems that it would be worthwhile to charter an independent study to evaluate this concept. Duke's state granted monopoly does not give them the right to block such a study nor proceed down a path that may be more expensive and clearly more environmentally harmful!!
