### Re: Form 556 Certification of Qualifying Facility Status

I enclose copies of Federal Energy Regulatory Commission (FERC) Form 556 Recertification of Qualifying Facility Status filed with FERC today on behalf of the following:

- Docket No. SP-2165, Biscoe Solar, LLC
- Docket No. SP-2168, Turkey Branch Solar, LLC
- Docket No. SP-1769, Nick Solar, LLC
- Docket No. SP-2205, Innovative Solar 14, LLC
- Docket No. SP-2153, Innovative Solar 15, LLC
- Docket No. SP-2486, FLS Solar 200, LLC
- Docket No. SP-2468, FLS Solar 170, LLC
- Docket No. SP-2339, FLS Solar 110, LLC
- Docket No. SP-2280, FLS Solar 100, LLC
- Docket No. SP-2346, Battleground Solar I, LLC
- Docket No. SP-1922, Beulaville Solar LLC
- Docket No. SP-1741, Warsaw Solar LLC
- Docket No. SP-2043, Warsaw Solar 2 LLC
- Docket No. SP-1923, Kenansville Solar LLC
- Docket No. SP-1695, Wallace Solar LLC
- Docket No SP-5189, Eden Solar, LLC

Thank you for your assistance in this matter. Please let me know if you have any questions.

	EPAct 2005 cogeneration facilities: The Energy Policy Act of 2005 (EPAct 2005) established a new section 210(n) of the Public Utility Regulatory Policies Act of 1978 (PURPA), 16 USC 824a-3(n), with additional requirements for any qualifying cogeneration facility that (1) is seeking to sell electric energy pursuant to section 210 of PURPA and (2) was either not a cogeneration facility on August 8, 2005, or had not filed a self-certification or application for Commission certification of QF status on or before February 1, 2006. These requirements were implemented by the Commission in 18 C.F.R. § 292.205(d). Complete the lines below, carefully following the instructions, to demonstrate whether these additional requirements apply to your cogeneration facility and, if so, whether your facility complies with such requirements.	OFFICIAL CC
	11a Was your facility operating as a qualifying cogeneration facility on or before August 8, 2005? Yes No	0
	<b>11b</b> Was the initial filing seeking certification of your facility (whether a notice of self-certification or an application for Commission certification) filed on or before February 1, 2006? Yes No	Feb 14 2018
ë s	If the answer to either line 11a or 11b is Yes, then continue at line 11c below. Otherwise, if the answers to both lines 11a and 11b are No, skip to line 11e below.	4
ntal Us acilitie	<b>11c</b> With respect to the design and operation of the facility, have any changes been implemented on or after February 2, 2006 that affect general plant operation, affect use of thermal output, and/or increase net power production capacity from the plant's capacity on February 1, 2006?	0 <mark>;</mark>
n Fa	Yes (continue at line 11d below)	
:t 2005 Requirements for Fundamental Use nergy Output from Cogeneration Facilities	No. Your facility is not subject to the requirements of 18 C.F.R. § 292.205(d) at this time. However, it may be subject to to these requirements in the future if changes are made to the facility. At such time, the applicant would need to recertify the facility to determine eligibility. Skip lines 11d through 11j.	
s for oger	<b>11d</b> Does the applicant contend that the changes identified in line 11c are not so significant as to make the facility a "new" cogeneration facility that would be subject to the 18 C.F.R. § 292.205(d) cogeneration requirements?	Ø
ement: from C	Yes. Provide in the Miscellaneous section starting on page 19 a description of any relevant changes made to the facility (including the purpose of the changes) and a discussion of why the facility should not be considered a "new" cogeneration facility in light of these changes. Skip lines 11e through 11j.	
Require utput 1	No. Applicant stipulates to the fact that it is a "new" cogeneration facility (for purposes of determining the applicability of the requirements of 18 C.F.R. § 292.205(d)) by virtue of modifications to the facility that were initiated on or after February 2, 2006. Continue below at line 11e.	
05 l y O	11e Will electric energy from the facility be sold pursuant to section 210 of PURPA?	Ø
t 20 nerg	$\square$ Yes. The facility is an EPAct 2005 cogeneration facility. You must demonstrate compliance with 18 c.F.R. § 292.205(d)(2) by continuing at line 11f below.	_
EPAct : of Ene	No. Applicant certifies that energy will <i>not</i> be sold pursuant to section 210 of PURPA. Applicant also certifies its understanding that it must recertify its facility in order to determine compliance with the requirements of 18 C.F.R. § 292.205(d) <i>before</i> selling energy pursuant to section 210 of PURPA in the future. Skip lines 11f through 11j.	
	<b>11f</b> Is the net power production capacity of your cogeneration facility, as indicated in line 7g above, less than or equal to 5,000 kW?	Ð
	Yes, the net power production capacity is less than or equal to 5,000 kW. 18 C.F.R. § 292.205(d)(4) provides a rebuttable presumption that cogeneration facilities of 5,000 kW and smaller capacity comply with the requirements for fundamental use of the facility's energy output in 18 C.F.R. § 292.205(d)(2). Applicant certifies its understanding that, should the power production capacity of the facility increase above 5,000 kW, then the facility must be recertified to (among other things) demonstrate compliance with 18 C.F.R. § 292.205(d)(2).	
	No, the net power production capacity is greater than 5,000 kW. Demonstrate compliance with the requirements for fundamental use of the facility's energy output in 18 C.F.R. § 292.205(d)(2) by continuing on the next page at line 11g.	

÷

	Lines 11g through 11k below guide the applicant through the process of demonstrating co requirements for "fundamental use" of the facility's energy output. 18 C.F.R. § 292.205(d)(2) lines on this page if the instructions on the previous page direct you to do so. Otherwise, sk	. Only respond to the

# Information Required for Topping-Cycle Cogeneration Facility

If you indicated in line 10a that your facility represents topping-cycle cogeneration technology, then you must respond to the items on pages 14 and 15. Otherwise, skip pages 14 and 15.

The thermal energy output of a topping-cycle cogeneration facility is the net energy made available to an industrial or commercial process or used in a heating or cooling application. Pursuant to sections 292.202(c), (d) and (h) of the Commission's regulations (18 C.F.R. §§ 292.202(c), (d) and (h)), the thermal energy output of a qualifying topping-cycle cogeneration facility must be useful. In connection with this requirement, describe the thermal output of the topping-cycle cogeneration facility by responding to lines 12a and 12b below.

**12a** Identify and describe each thermal host, and specify the annual average rate of thermal output made available to each host for each use. For hosts with multiple uses of thermal output, provide the data for each use in separate rows.

	Name of entity (thermal host) taking thermal output	Thermal host's relationship to facility; Thermal host's use of thermal output	thermal output attributable to use (net of heat contained in process return or make-up water)
1)		Select thermal host's relationship to facility

2)		Select thermal host's relationship to facility	
2)		Select thermal host's use of thermal output	Btu/h
3)		Select thermal host's relationship to facility	1
5)		Select thermal host's use of thermal output	Btu/h
4)		Select thermal host's relationship to facility	
4)		Select thermal host's use of thermal output	Btu/h
5)		Select thermal host's relationship to facility	
5)		Select thermal host's use of thermal output	Btu/h
0		Select thermal host's relationship to facility	
6)		Select thermal host's use of thermal output	Btu/h

Check here and continue in the Miscellaneous section starting on page 19 if additional space is needed

**12b** Demonstration of usefulness of thermal output: At a minimum, provide a brief description of each use of the thermal output identified above. In some cases, this brief description is sufficient to demonstrate usefulness. However, if your facility's use of thermal output is not common, and/or if the usefulness of such thermal output is not reasonably clear, then you must provide additional details as necessary to demonstrate usefulness. Your application may be rejected and/or additional information may be required if an insufficient showing of usefulness is made. (Exception: If you have previously received a Commission certification approving a specific use of thermal output related to the instant facility, then you need only provide a brief description of that use and a reference by date and docket number to the order certifying your facility with the indicated use. Such exemption may not be used if any change creates a material deviation from the previously authorized use.) If additional space is needed, continue in the Miscellaneous section starting on page 19.

Topping-Cycle Operating and

OFFICIAL

Feb 14 2018

57

63

Applicants for facilities representing topping-cycle technology must demonstrate compliance with the toppingcycle operating standard and, if applicable, efficiency standard. Section 292.205(a)(1) of the Commission's regulations (18 C.F.R. § 292.205(a)(1)) establishes the operating standard for topping-cycle cogeneration facilities: the useful thermal energy output must be no less than 5 percent of the total energy output. Section 292,205(a)(2) (18 C.F.R. § 292.205(a)(2)) establishes the efficiency standard for topping-cycle cogeneration facilities for which installation commenced on or after March 13, 1980: the useful power output of the facility plus one-half the useful thermal energy output must (A) be no less than 42.5 percent of the total energy input of natural gas and oil to the facility; and (B) if the useful thermal energy output is less than 15 percent of the total energy output of the facility. be no less than 45 percent of the total energy input of natural gas and oil to the facility. To demonstrate compliance with the topping-cycle operating and/or efficiency standards, or to demonstrate that your facility is exempt from the efficiency standard based on the date that installation commenced, respond to lines 13a through 13I below. If you indicated in line 10a that your facility represents both topping-cycle and bottoming-cycle cogeneration technology, then respond to lines 13a through 13l below considering only the energy inputs and outputs attributable to the topping-cycle portion of your facility. Your mass and heat balance diagram must make clear which mass and energy flow values and system components are for which portion (topping or bottoming) of the cogeneration system. 13a Indicate the annual average rate of useful thermal energy output made available to the host(s), net of any heat contained in condensate return or make-up water Btu/h 13b Indicate the annual average rate of net electrical energy output Efficiency Value Calculation kW **13c** Multiply line 13b by 3,412 to convert from kW to Btu/h 0 Btu/h **13d** Indicate the annual average rate of mechanical energy output taken directly off of the shaft of a prime mover for purposes not directly related to power production (this value is usually zero) hp 13e Multiply line 13d by 2,544 to convert from hp to Btu/h 0 Btu/h 13f Indicate the annual average rate of energy input from natural gas and oil Btu/h **13g** Topping-cycle operating value =  $100 \times 13a / (13a + 13c + 13e)$ 0 % **13h** Topping-cycle efficiency value = 100 \* (0.5\*13a + 13c + 13e) / 13f0 % 13i Compliance with operating standard: is the operating value shown in line 13g greater than or equal to 5%? Yes (complies with operating standard) No (does not comply with operating standard) 13j Did installation of the facility in its current form commence on or after March 13, 1980? Yes. Your facility is subject to the efficiency requirements of 18 C.F.R. § 292.205(a)(2). Demonstrate compliance with the efficiency requirement by responding to line 13k or 13l, as applicable, below. No. Your facility is exempt from the efficiency standard. Skip lines 13k and 13l. 13k Compliance with efficiency standard (for low operating value): If the operating value shown in line 13g is less than 15%, then indicate below whether the efficiency value shown in line 13h greater than or equal to 45% Yes (complies with efficiency standard) No (does not comply with efficiency standard) 131 Compliance with efficiency standard (for high operating value): If the operating value shown in line 13g is greater than or equal to 15%, then indicate below whether the efficiency value shown in line 13h is greater than or equal to 42.5%: Yes (complies with efficiency standard) No (does not comply with efficiency standard)

# Information Required for Bottoming-Cycle Cogeneration Facility

If you indicated in line 10a that your facility represents bottoming-cycle cogeneration technology, then you must respond to the items on pages 16 and 17. Otherwise, skip pages 16 and 17.

The thermal energy output of a bottoming-cycle cogeneration facility is the energy related to the process(es) from which at least some of the reject heat is then used for power production. Pursuant to sections 292.202(c) and (e) of the Commission's regulations (18 C.F.R. § 292.202(c) and (e)), the thermal energy output of a qualifying bottomingcycle cogeneration facility must be useful. In connection with this requirement, describe the process(es) from which at least some of the reject heat is used for power production by responding to lines 14a and 14b below.

14a Identify and describe each thermal host and each bottoming-cycle cogeneration process engaged in by each host. For hosts with multiple bottoming-cycle cogeneration processes, provide the data for each process in separate rows. Has the energy input to

Name of entity (thermal host) performing the process from

21		Select thermal host's process type	
3)		Select thermal host's relationship to facility	Yes No 🗌
<i>,</i>		Select thermal host's process type	

Check here and continue in the Miscellaneous section starting on page 19 if additional space is needed

14b Demonstration of usefulness of thermal output: At a minimum, provide a brief description of each process identified above. In some cases, this brief description is sufficient to demonstrate usefulness. However, if your facility's process is not common, and/or if the usefulness of such thermal output is not reasonably clear, then you must provide additional details as necessary to demonstrate usefulness. Your application may be rejected and/or additional information may be required if an insufficient showing of usefulness is made. (Exception: If you have previously received a Commission certification approving a specific bottoming-cycle process related to the instant facility, then you need only provide a brief description of that process and a reference by date and docket humber to the order certifying your facility with the indicated process. Such exemption may not be used if any material changes to the process have been made.) If additional space is needed, continue in the Miscellaneous section starting on page 19.

Bottoming-Cycle Operating and

Applicants for facilities representing bottoming-cycle technology and for which installation commenced on or after March 13, 1990 must demonstrate compliance with the bottoming-cycle efficiency standards. Section 292,205(b) of the Commission's regulations (18 C.F.R. § 292.205(b)) establishes the efficiency standard for bottoming-cycle cogeneration facilities: the useful power output of the facility must be no less than 45 percent of the energy input of natural gas and oil for supplementary firing. To demonstrate compliance with the bottoming-cycle efficiency standard (if applicable), or to demonstrate that your facility is exempt from this standard based on the date that installation of the facility began, respond to lines 15a through 15h below.

If you indicated in line 10a that your facility represents both topping-cycle and bottoming-cycle cogeneration technology, then respond to lines 15a through 15h below considering only the energy inputs and outputs attributable to the bottoming-cycle portion of your facility. Your mass and heat balance diagram must make clear which mass and energy flow values and system components are for which portion of the cogeneration system (topping or bottoming).

15a Did installation of the facility in its current form commence on or after March 13, 1980?	
Yes. Your facility is subject to the efficiency requirement of 18 C.F.R. § 292.205(b). Demonstrative with the efficiency requirement by responding to lines 15b through 15h below.	ate compliance
No. Your facility is exempt from the efficiency standard. Skip the rest of page 17.	! }

<b>15a</b> Did installation of the facility in its current form commence on or after March 13, 1980?				
Yes. Your facility is subject to the efficiency requirement of 18 C.F.R. § 292.205(b). De with the efficiency requirement by responding to lines 15b through 15h below.	monstrate comp			
No. Your facility is exempt from the efficiency standard. Skip the rest of page 17.	:			
15b Indicate the annual average rate of net electrical energy output				
15c Multiply line 15b by 3,412 to convert from kW to Btu/h	0			
<b>15d</b> Indicate the annual average rate of mechanical energy output taken directly off of the shaft of a prime mover for purposes not directly related to power production (this value is usually zero)				
15e Multiply line 15d by 2,544 to convert from hp to Btu/h	0			
<b>15f</b> Indicate the annual average rate of supplementary energy input from natural gas or oil				
<b>15g</b> Bottoming-cycle efficiency value $=$ 100 * (15c + 15e) / 15f	0 '			
<b>15h</b> Compliance with efficiency standard: Indicate below whether the efficiency value shown than or equal to 45%:

# Certificate of Completeness, Accuracy and Authority

Applicant must certify compliance with and understanding of filing requirements by checking next to each item below and signing at the bottom of this section. Forms with incomplete Certificates of Completeness, Accuracy and Authority will be rejected by the Secretary of the Commission.

Signer identified below certifies the following: (check all items and applicable subitems)

	He or she has read the filing, including any information contained in any attached documents	, such as cogener	ation
X	mass and heat balance diagrams, and any information contained in the Miscellaneous section	starting on page	19, and
	knows its contents.		

He or she has provided all of the required information for certification, and the provided information is true as stated, to the best of his or her knowledge and belief.

He or she possess full power and authority to sign the filing; as required by Rule 2005(a)(3) of the Commission's Rules of Practice and Procedure (18 C.F.R. § 385.2005(a)(3)), he or she is one of the following: (check one)

☐ The person on whose behalf the filing is made

An officer of the corporation, trust, association, or other organized group on behalf of which the filing is made

- An officer, agent, or employe of the governmental authority, agency, or instrumentality on behalf of which the filing is made
- A representative qualified to practice before the Commission under Rule 2101 of the Commission's Rules of  $\boxtimes$ Practice and Procedure (18 C.F.R. § 385.2101) and who possesses authority to sign
- He or she has reviewed all automatic calculations and agrees with their results, unless otherwise noted in the Miscellaneous section starting on page 19.

He or she has provided a copy of this Form 556 and all attachments to the utilities with which the facility will

interconnect and transact (see lines 4a through 4d), as well as to the regulatory authorities of the states in which the facility and those utilities reside. See the Required Notice to Public Utilities and State Regulatory Authorities section on page 3 for more information.

Provide your signature, address and signature date below. Rule 2005(c) of the Commission's Rules of Practice and Procedure (18 C.F.R. § 385.2005(c)) provides that persons filing their documents electronically may use typed characters representing his or her name to sign the filed documents. A person filing this document electronically should sign (by typing his or her name) in the space provided below.

# Miscellaneous

Use this space to provide any information for which there was not sufficient space in the previous sections of the form to provide. For each such item of information *clearly identify the line number that the information belongs to*. You may also use this space to provide any additional information you believe is relevant to the certification of your facility.

Your response below is not limited to one page. Additional page(s) will automatically be inserted into this form if the length of your response exceeds the space on this page. Use as many pages as you require.

Line 5b (see also Line 11): On July 25, 2017, AES Corporation, through AES Lumos 'Holdings, LLC, and Alberta Investment Management Corporation, through PIP5 Lumos LLC, each acquired fifty percent (50%) (for a cumulative total of one hundred percent (100%)) of the common equity voting interests in FTP Power LLC.

On December 2, 2015, two transactions were consummated that (1) changed the upstream ownership of Eden Solar, LLC ("Eden Solar") and (2) transferred control over dispatch and day-to-day operations of the facility. As a result of the first transaction (see FERC Docket No. EC16-14), the upstream ownership of Eden Solar is as follows:

(1) 1% of the membership interests in Eden Solar are held by FTS Eden Managing Member, LLC ("Eden MM") as the Managing Member and 99% of the membership interests in Eden Solar are held by STCE Eden Solar, LLC as a passive tax equity investor.

(2) 100% of the membership interests in Eden MM are held by sPower FinCo 3 LLC ("FinCo 3").

(3) 100% of the membership interests in FinCo 3 are held by sPower Solar Holdings 3, LLC ("Holdings 3").

(4) 100% of the membership interests in Holdings 3 are held by Sustainable Power Group, LLC ("sPower").

(5) 100% of the membership interests in sPower are held by FTP Power LLC.

As a result of the second transaction (see FERC Docket No. EC16-4), Eden Solar leased and transferred control over the facility to Land of the Sky MT, LLC ("Land of the Sky"). Land of the Sky, as lessee, controls dispatch of the facility and directs day-to-day operations. Therefore, Land of the Sky has been designated the facility operator in Line 5c.
