Subject: Docket E-100, Sub 180CS

Dear NC Utilities Commission,

Please reject Duke Energy's proposal for revising net metering rules in North Carolina. This proposal is a complicated attempt to further Duke's profits and harmful plans to continue fossil fuel burning.

Duke Energy's plan confuses and punishes solar customers, hurts ALL of us by allowing Duke to continue burning fossil fuels, and ignores market trends by failing to recognize solar's overall benefits to the electricity grid and the economy overall.

Moreover, Duke's claim that metering forces the poor to subsidize affluent solar customers is false, and has been repeatedly debunked by metering experts including most recently by Tom Beach.

Thank you for your consideration,
Tina Shull
