NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions.

Message

NC Utilities Commission, Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!

Please allow citizens of North Carolina the freedom to contribute to their communities with solar power. Duke is trying to shut out citizens. Duke is putting a new meaning to monopoly!! Duke has continued to raise rates on people to enable to buy back stock and pay executives salaries out of line for 90% for the people who they profess to serve. SAY NO TO DUKE PROPOSALS.

I support Duke Energies power generation plans which do NOT rely on undependable Wind and Solar. Its quite obvious to an unbiased individual that both Wind and Solar are marginally able to supply for North Carolinas energy needs. That and the fact that new reports over the last several years including in Texas has shown that strong winds and sever winter events damage and interrupt these supposedly environmentally friendly power generation approaches. Supposing that North Carolina and the Federal government forces EV adoption policies on us, the demand for additional power enervation will only increase, to the point where Carbon generating power options MUST be available, not just considered. Thank you for hearing me out! Brian J Holland Applications Engineer Lake Cable llc my Home address is 212 Carters Lane Purlear NC 28665

Please stop Duke Energy from blocking sustainable generation. Actually, I want the reverse -- I want you to stop Duke Energy from building more fossil fuel generation and raising my bill to pay for it. Make Duke serve their ratepayers. The ratepayers want clean air, more reliability, less risk, and of course lower bills. And the way to meet those goals is clearly solar plus storage, and the more local the better. Duke is supposed to be working for the ratepayers. It is not. The ratepayers' advocate against Duke Energy is supposed to be the North Carolina Utilities Commission. At this point in time, that also is not working. The Utilities Commission owes it to the ratepayers of NC to make Duke consider the various solar plus storage options that are available and that have been proposed at least since 2017. Drag yourselves and Duke into the future where electrical generation is local, sustainable, and affordable. It is fossil fuel generation that is "unachievable" given current requirements -- local sustainable solar plus storage is the only reasonable path forward.
