Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

Anne Ross

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Christy Lynch

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. I would call this a win-win situation for the utility company because they can invest in their customers instead of in dirty coal or dangerous nuclear power. The utility makes money providing the infrastructure without having to invest millions in new nuclear plants- the homeowner makes the investment for them. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to

protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Dear NC Utilities Commission,

Clean energy is the only way to live on earth since we are air breathing mammals. It makes sense to stop doing the opposite nature has done for millions of years and quit putting carbon into the air we breathe rather than sequestering it through green cities, gardens and lives. Fighting green tech at this point, is fight against life for you, your children and their children's children.

Subject: Docket # (Docket E-100 Sub 83)

To the North Carolina Utilities Commission:

I am submitting my statement notifying you that I strongly support fair net metering policies in North Carolina. There are many benefits to strong Net metering policies some of which include:

\* Supports the state and nation's ability to transition away from the use of traditional fossil fuel

that pollute our air and water and contribute to human induced climate change.

\* Motivates consumers to contribute to changing fossil fuel dependence and allows them to receive fair credit for their contribution to clean, renewable energy.

\* Supports our economy by supporting the state's growing solar industry, which creates thousands of jobs and dollars to the state economy.

\* Enables rooftop systems to become more affordable to all, including lower income customers enabling them to generate their own electricity and reduce their financial burden.

\* Reduces costly peak demand, increases energy efficiency, and thus lessens the burden on distribution systems, reducing overall energy costs for consumers.

Thank you for your continued support of the net metering policies in North Carolina.
