Please support only solar plus storage. The science proves it is more reliable, cheaper and environmentally responsible than any fossil fuel option. Please don't be misled by Duke Energy. As it is said, when you only currently rely on a hammer, everything looks like a nail.

I am very interested in how renewable energy can help us manage our climate crisis. Duke Energy is only interested in fossil fuels. Please stop helping Duke to block genuine solutions. Sharing Solar will all Duke energy customers as the fastest, cheapest, and fairest way to tackle the climate crisis and soaring energy bills. Duke does NOT have our best interests in mind!

NC Utilities Commission, Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!

NC Utilities Commission, North Carolina is past due for a shift in the profit-driven monopoly mindset that increasingly harms communities, drives up power bills, and makes the climate crisis worse. I just moved here from KY and cannot believe how hot it has become here since my college years in SC. This cannot continue! Many experts agree that local solar-plus-storage is the best tool we have to address the climate crisis. It is clear that the only way North Carolina can finally get aligned with the climate scientists is to rapidly expand local solar. All Duke Energy's residential, commercial and nonprofit customers can share in the costs and benefits of local solar much like we currently pay for polluting power plants – through the electric rate system. Initial investment is high, but if the state will subsidize the cost of solar installation, you will save so much more in costs of climate-related costs for health care, cleaning Lake Norman and other locations devastated by nuclear and fossil fuel plants.

If you are really FOR the people like you claim then you will allow the people access and the right to rooftop solar and reject Duke Energy's plans to thwart it. You are supposed to be making life better and cheaper for your constituents.

Please support alternative energy sources and prevent Duke Energy from thwarting safer solutions like solar. My energy bill goes up when Duke Energy spends more money on its polluting energy sources. The rate structure encourages Duke Energy to spend more than they have to.

NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions.

NC WARN has a well-researched plan to counter Duke Energy's proposal. Please help individual homeowners like my husband and I get solar panels on our roof. We've explored it in the past, and with Duke's current restrictions it's not affordable for us. There are much better solutions than Duke's to address the climate crisis. I fully support the NC Warn proposal and hope you will too. Thank you for your consideration.

We have had rooftop solar panels and battery back-up on our home for 5 years. We have enjoyed the lower electric bills (monthly average = \$50) compared to our former electric bill (monthly average = \$140). Plus we also enjoy the ability to have electric power any time Duke Power is interrupted due to whatever. I cannot understand why Duke Power and the NC Utilities Commission are so against solar energy when it has been proven effective in replacing dirty energy derived from fossil fuels. I understand Duke is making a killing off of its customers and barely even trying to move into the 21st Century by incorporating large-scale solar, but enough is enough. "We the People" have had enough of corporate greed and we will do whatever it takes to help ourselves save money and make our lives easier by demanding and using renewable energy in our lives even as Duke and the NC Utilities Commission are trying their best to stop us. Thank you for your time.
