Subject: Docket E-100, Sub 180CS

To Whom it May Concern,

Please concern this note a formal comment and request to reject Duke Energy's proposed restructuring of Net Energy Metering and additional \$14/mo charge directed at rooftop solar customers. Now is the time we should be encouraging INDUSTRY to improve technology and implementation to better handle distributed power generation. It is not the time to penalize citizens seeking to control energy costs, provide flexibility and power generation to the regulated industry, and increase alternatives to fossil fuels. Thank you,
