We need more solar and less gas! We have solar panels on our house and they work great. Let's make Duke use more solar and wind. Don't build more gas fired plants. Thanks Kathryn Liss

Tell Duke to "stand down" and get smart!!!! Say no to gas powered plants and long transmission lines. Put the power where it is generated. why not finance solar on customer's roofs???? Put a storage at the end of the street!!! Why does Duke want to spoil the environment? Why does Duke want to spoil the land with poles and lines? It seems the only thing Duke is concerned about is their personal paycheck and how many executives have compounds which have solar?? and are self sufficient? take a hard look at where the money is being spent - you know the old adage - follow the money.

"E-100 Sub 190

Message

Dear NCUC, You - like everyone else - are responsible for the earth's livability. As you close public comment for Duke Energy's consolidated docket E-100 Sub 190, we urge you to put communities and the climate first. Communities living in the shadow of dirty power plants have already paid dearly for our reliance on energy sources that are not clean – suffering serious harms to their health, air, and water. To ensure a just transition, a carbon plan must acknowledge the role these facilities continue to play in communities across North Carolina and ensure their voices are heard in visioning a clean energy future. Building new gas infrastructure and increasing our reliance on fracked gas to generate electricity risks climate catastrophe due to fugitive methane, threatens to saddle ratepayers with billions in stranded costs, puts us at the mercy of gas price volatility, and requires destructive pipelines that may never be permitted. We urge Commissioners to agree to a final carbon plan that is in the public interest. Please put equity, clean energy, and a swift transition away from fossil fuels at the center of the North Carolina carbon plan.

Good day, I am a retired Speech Pathologist, and I am concerned about the future of my and your grandchildren. Duke Energy's Energy Plan must be rejected. The path we need to take is Solar plus battery storage. I urge you to act in the interest of the people of the state of North Carolina. A. H. Pillow, Durham, NC 27707

E-100 Sub 190

Message

Dear Energy Commission Members: Climate change and global warming are very real, and allowing Duke Energy to use more fossil fuels is not the answer. We need clean energy production. We don't need more fracking, which leads to contaminated water and the escape of methane gas into the atmosphere, further damaging the health of vulnerable communities and exacerbating global warming. We need more clean energy production from wind and solar. Since Duke Energy bought out Progress and CP&L, we have had decreased competition and higher energy costs. And have you forgotten the coal ash scandal so soon? Please do not allow them to increase their use of coal and gas.

Dear Utilities Commission - please reject the Duke Energy climate proposal as it is not a solution to the climate crisis. Please consider all the evidence submitted by NC WARN and review their Solar Sharing proposal. There would be no up-front cost for customers to add solar plus battery storage. It would be funded through the Rate System – just as we now all pay for dirty power. Local solar-with-storage can expand across NC quickly, inexpensively and equitably – with a priority on disadvantaged communities. All homes, businesses, nonprofits benefit in many ways – even if they don't have solar themselves. It avoids the year-after-year rate hikes in Duke Energy's high-risk plan to keep expanding fossil fuels and building experimental nuclear reactors. Experts agree that Local Solar is the best tool we have to address the climate crisis.

I think that SaveNCSolar makes a very good point that rooftop solar puts a lot less stress on the grid, which is a prime concern. As they say "It's the only option which combines generation, transmission, and distribution all in one package". As you know, many clean energy projects are delayed because there is not enough grid capacity to handle the generated electricity. It's going to take a long time to upgrade all the individual grids, something for which the US Energy Department is currently developing subsidies. NC Solar's proposals for more solar, along with more storage, solves a lot of problems directly and expeditiously. Please figure out a way to go forward with clean energy. It will save government and consumers a lot of money and speed up the race to net zero.

Message

The climate crisis is bad and getting worse. Inaction is not an option. The NCUC must do everything it can to reduce GHG emissions. Adopting renewables for electricity generation not only would reduce GHG but makes economic sense. The NCUC and staff have a long standing relationship with Duke so it will take courage for the NCUC to require Duke to transition as quickly as possible to renewables while maintaining their statutory obligations.

I'm writing to you to urge the commission not to rubber-stamp Duke Energy's plan for long term electricity production. Local solar plus storage will enable our state to rapidly implement renewable energy systems in a cost-effective, flexible, and resilient manner. Unfortunately, Duke Energy has no interest in relinquishing control of a system that has enabled them to exert monopoly control over power generation and delivery in NC. Here in Asheville, we spent years pushing Duke to give up its coal-fueled power plant. It finally happened as the cost of coal rose and natural gas prices declined. Then it was a fight to convince them to clean up their mess (coal ash lagoons.) I moved here from Ohio, where First Energy was involved in a tawdry bribery scheme with the state legislature. After moving to NC, I installed rooftop solar at my own expense, although even with net metering I'll be dead before I pay it off. Since then, Duke has changed the rules on net metering. Please allow the citizens of NC to achieve some control over access to electricity and give us the means to hold utilities accountable.
