Duke leaders' "pro-Carbon Plan" would ensure that North Carolina remains a top driver of the climate crisis. Thousands of state residents are still reeling from past superstorms even as scientists warn that the coming hurricane season could be our worst ever. Duke Energy leaders and state officials must end the pretense that North Carolina is making a clean transition. The climate situation is desperate, this state is failing its duty, and local solar could quickly begin to change that. Reject Duke Energy's climate-wrecking plans and pursue climate solutions that work

I'm writing to strongly urge the Utilities Commission to reject the fossil-fuels-heavy approach proposed by Duke Energy and instead invest in the solar-plus-storage approach to meet North Carolina's energy needs in the future. It's just common sense that by distributing power generation throughout the state and generating power close to the point of use offers efficiencies and environmental benefits that cannot be matched by centralized fossil fuel power production. I have put my money where my mouth is, having installed a solar array at my own expense on my rooftop. I am fortunate enough to be able to afford it. Please, please represent the citizens of NC and resist pressure from Duke Energy.

I'm seeing ads to contact you about requiring Duke Energy to supply more power via the employment of wind and solar. Personally, I am afraid of dependency upon wind and solar. Natural gas is a good source of energy; however, the pricing of same can be very volatile. Personally, I prefer clean coal. With modern scrubbers, emissions are minimal, and electricity availability is readily assured.

Duke Energy is a "regulated" monopoly. Therefore, they MUST be regulated. I am not saying that you are not doing this now, just asking that you be sure to continue to do so in the future. The utility plans to add gas plants at consumers' expense rather than building more consumer- and planet-friendly renewables, which would result in less profit for the behemoth. Please make sure that they do not so blatantly disregard consumer interests.
