Re: Carbon Plan Docket #E100 Sub 190CS

Dear Commission

The data thus far makes it abundantly clear that responsible management of our resources and the environment will be crucial in the battle against the impact of climate change. Clean energy technologies like wind and solar are the cheapest energy options available today. This gap will only continue to grow as renewable technologies continue to improve. Lingering onto outdated fossil fuels creates additional and unnecessary energy expenses for businesses, households and the state.

Respectfully, **BILL ROSENBERG**
WILMINGTON, NC
