Duke Energy will cost North Carolina and its residents more money and harm than necessary if it continues with its carbon plan. Using solar energy to produce hydrogen from water clean and efficient, and the expansion of localized solar panels will reduce strain on the grid. Duke Energy nergy has its own interests at heart and is not acting in the best interest of North Carolina or its citizens and we must accordingly.

The sun is a wonderful source of energy. Millions of years ago the sun helped grow trees that sequestered a lot of carbon dioxide to make the planet suitable for life as we know it. As we learned that a carbon dioxide level above 400ppm would have devastating effects on the earth, with heat capture, sea level rising and the consequences to infrastructure, population migration and access to potable water, some refuse to take the blame. Both for their intentional short term profit misinformation and for their marketing to those that suck at their teat. The insurance companies are showing the way forward. Dump any climate related risk! How then should we handle the influx of wealthy immigrants buying up more hospitable living locations? Mexico City, Cape Town and over thirty other wealthy major cities are losing population due to a climate caused water crisis. Migration is the real climate crisis. Duke Energy is, by their negligence making life in America unaffordable to Americans.

PLEASE reject the harmful and irresponsible plan put forth by Duke Energy to expand non-sustainable energy. This is exactly the time when North Carolina, the world, and you need to focus on renewable energy and cease energy strategies that only line the pockets of corporate sponsors while wreaking harm on the Earth and its population.

### Message

Amid a ghastly global escalation of crippling heat waves, wildfires and superstorms, United Nations Secretary-General António Guterres said last week that world leaders must quickly find “an exit ramp off the highway to climate hell.” He slammed fossil fuel corporations as the “godfathers of climate chaos.” In voluminous filings to the NC Utilities Commission on May 28, attorneys representing scores of social justice, environmental, consumer, and business groups, along with Attorney General Josh Stein, widely rejected Duke’s (pro) Carbon Plan proposal for handling the state’s electricity needs in coming decades. Nearly all parties oppose Duke’s plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation. Most parties cite the need for a shift to renewable power, with Stein’s lawyers alluding to more solar-plus-storage on homes and businesses. I strongly support NC WARN’s proposal for a sweeping expansion of SPS by having it funded through the rate system.

As the grandparents of children growing up in NC, we urge you to reject Duke Energy's current status quo expansion plan and support instead the expansion of solar panel electrical generation along with storage via batteries. Rooftop solar plus storage. Distributed electrical generation such as S-P-S works very well and helps our society avoid expanding consumption of fossil fuels whose long range effects are cooking our planet. Patrick and Rene' Martin Raleigh

Why are you allowing Duke Power to expand fossil fuel use when the burning of additional fossil fuels will only aggravate the existing damage fossil fuels are doing to the planet? Why are you allowing Duke Power to penalize homeowners that own or are considering the installation of roof solar systems? Don't you work for the public? Don't you care about the climate crisis?
