Our family is very disappointed with Duke Energy's proposed changes to net metering as it: (1) fails to consider the actual cost benefits of distributed solar generation, (2) ignores the fact that many homes with solar already have or are considering adding battery storage that could easily be made available at very low cost to Duke Energy instead of building new, expensive and environmentally harmful gas peaker plants and (3) it utterly ignores recognition of our current climate emergency! Thank you for your consideration.

Unless you are one of the luckier (aka wealthier) stockholders of Duke Energy, you must realize that Duke Energy does not give one hoot about its customers except whether or not it can eke every bit of money possible from them (us). And, you must also realize that Duke Energy could care less about the FACT that climate change is occurring at a pace unsustainable, even though the CEOs of Duke Energy and the stockholders...all of them... as well as the rest of the world, are suffering from the effects of the climate warming that has already occurred: more powerful thunderstorms, hurricanes, tornadoes, fires, droughts, and more. YOU have the authority AND the responsibility to bring Duke Energy down to the level required to sustain this Earth and to make things more reasonable for the citizens of this Earth and for the unfortunate customers of Duke Energy. So: Please, require and conduct (as per existing NC state law) a cost-benefit study, before making any changes to net metering rules which govern how solar homes are credited by Duke Energy for the power they feed onto the grid. Our family would love to add solar to our house. Duke Energy plans are making us exceedingly wary of our future with solar under their crooked auspices. Please, rein Duke Energy in by rejecting its ridiculous Carbon Plan which massively increases methane gas production. WHAT?? How could they even suggest such idiocy in a time when all the world realizes methane gas REDUCTION is key to bringing the warming of our climate back toward being under control. There is NO time left for this crap. Duke Energy only cares about its outsized profits. YOU must care about the rest of us and of all living things on this planet. Sorry folks. There is ONLY ONE planet available for all of us to live on.

Reject Duke Energy's continuous attempts to hinder rooftop solar!! The health of our planet and our own species depends on people like the NCUC recognizing and thwarting greedy, short-sighted companies like Duke that quite literally do NOT care about human quality of life or whether our air is breathable in 20 years! STOP letting Duke and their money run lawless; don't let them buy you!! Please! All our immediate futures depend on ending fossil fuels crushing terrorism, motivated by frightened, greedy, uneducated, older people who just do not want to admit the situation on this planet is now almost beyond saving. We MUST stop fossil fuels in it's tracks now. We MUST tell Duke to get on board with clean energy and stop using ratepayer money to distort facts and buy politicians. PLEASE. We need you. Thank you

Please reject Duke Energy's attempt to hinder roof top solar. We need, indeed we demand, that Duke Energy convert from fossil fuels to clean renewables. Roof top solar can help with this, but with or without the help Duke must make a 100% conversion to renewables as quickly as possible. The NCUC must do a thorough and independent investigation of roof top solar and community solar systems before making any ruling on net metering in NC. NCUC must recognize that its job is to represent the rate-payers, not Duke Energy. Indeed, the NCUC's job here is to regulate Duke Energy.

Please reject Duke Energy's proposed changes to net metering and have an objective study performed. I am not inclined to agree with their contention that solar net metering customers aren't paying our fair share. I don't think we need increased fees and other revisions designed to further reduce the credit we receive for relieving demands on the grid and providing a clean energy supply. However, if you want to keep everything else the same and make them stop erasing rolled-over credits at the end of May (just as air conditioning season kicks in!), I think that would improve the incentives to use solar power with net metering. Thank you, Laura Murray

I encourage the commission to reject the Duke Energy proposal to change the metering rules for excess solar energy that rooftop solar producers, like myself, supply to the grid. At this critical time when our state and country need to reduce our reliance on fossil fuels in order to stop rapid climate change, increased production of energy from renewable sources is critical. The change in metering proposed would discourage the growth of solar power. Encouraging the transition to renewable energy may save Duke Energy capital investment in new power sources, thus reducing their costs in the long run. Please set North Carolina on a better path forward for all by rejecting this metering plan. Thank you, Ann Miller

Hello, I am a proud solar panel owner and user, and believe this in the best interest of North Carolina, in spite of what Duke Energy lobbies. It's not fair for Duke to change the value of our solar investments retroactively and they should be supportive of renewable energy, as a whole, even if it hurts their bottom line. The Commission should do the cost-benefit analysis for rooftop solar that was required by law (HB 589) before changing net metering rules. This is a very important topic to improve NC's carbon footprint and relationship with renewable energy. Thanks!

I attended a discussion on this very topic at the NC State Energy Conference this April. My main take away at that time was there would be a significant devaluation to the energy that I generate. With Duke's proposal to shift to a time-of-use model, higher fixed monthly fees and reduced compensation for excess solar generation, this means that those solar customers who embraced a clean renewable source of energy, of which Duke Energy is able to claim the recs from, will result in significant devaluation of their system. This is not a good business decision if the desire is encourage more home solar systems across the state. The best way to reduce carbon emissions and green house gases is to encourage more homes to install roof top solar generation, and this proposal will certainly not do that. We all want to do are part to met our states stated carbon reduction goals. This would disincentive the average consumer from the expensive proposition of installing these systems. From what I could tell, a full cost-benefit analysis has not yet been conducted by the NCUC. As with all good business decisions, this must be part of the business case. So please, conduct a full cost-benefit analysis before we accept Duke Energy's proposal.

Please do not accept Duke Energy's net metering proposal. It would discourage people from installing rooftop solar panels at a time when more clean energy is needed. I have solar panels and am very proud of my contribution to the energy needs of my community. However, I do not believe Duke Energy should have this energy without paying for it.

I am outraged by Duke Power's proposal to change net metering rules. It is unfair for Duke to change the value of my solar investment retroactively. I invested thousands of dollars to supply clean energy for the use of my family, and to reduce our carbon footprint. The Utilities Commission should conduct cost benefit analysis for rooftop solar as required by law before any attempt to change net metering rules. Joseph Neff 2005 W. Club Blvd Durham, NC 27705

I am a Solar Homeowner and am very disappointed in Duke Energy for not only planning to use more fossil fuels and not support more solar projects but also in not supporting solar by paying less than market value for our rooftop solar. Duke should be paying us more for helping them generate neagery not less. DUke has a terrible record in environmental protection and should be held accountable for their poor decisions. Please do not let Duke get away with their proposal to pay owners less for helping Duke generate energy! Melinda Halford

We should all be encouraging each other to invest in renewable energy sources. Solar is currently one of the most accessible for consumers to invest in. The Commission should do the cost-benefit analysis for rooftop solar that was required by law (HB 589) before changing net metering rules that would discourage progress.

I am a homeowner who is considering installing rooftop solar in my home, and I am totally opposed to the NEM changes Duke is proposing to the NCUC. These changes would fundamentally change my calculation about whether to invest in rooftop solar. Please don't allow them to go through. They will also probably hurt employment in our state, and suppress both demand for and supply of renewable energy. Sincerely, Andrew Willis, Greensboro

Hi,

I'm a resident of Wilmington, NC. I would like the NCUC to conduct its complete cost-benefit analysis for the related proposal by Duke Energy on net metering legislation changes. It doesn't make sense to skip it, except for the interests of that one company. I believe it is statutorily-required to be in compliance with NC law, anyway.

Thank you!

Andrew Powers

I'm concerned about Duke Energy's plan to retroactively make my investment in solar energy less efficient. It's clear that this isn't about trying to save the planet or fight climate change--it's about money. If I had the option, I would choose a different utility company, but as Duke has a monopoly, I'm denied that choice. Your governmental oversight commission needs to step in and do right by North Carolina's citizens and the world at large. Thank you.
