Docket

E-100 Sub 190

Message

Dear NCUC, As you close public comment for Duke Energy's consolidated docket E-100 Sub 190, I am writing to urge you to place the interest of our communities and the climate before those of Duke Energy. Those communities living in the shadow of dirty power plants have already paid dearly for our reliance on energy sources that are not clean, and have suffered serious harm to their health, air, and water. In order to ensure a just transition, any carbon plan must acknowledge the role that these existing facilities continue to play in communities across North Carolina and ensure those voices are heard in visioning a clean energy future. I believe that building new gas infrastructure and increasing our reliance on fracked gas to generate electricity risks climate catastrophe due to fugitive methane, threatens to saddle ratepayers with billions in stranded costs, puts us at the mercy of gas price volatility, and requires destructive pipelines that may never be permitted. I urge the Commissioners to agree to a final carbon plan that is in the public interest. Please put equity, clean energy, and a swift transition away from fossil fuels at the center of the North Carolina carbon plan. Thank you for your consideration.

Docket

E-100 Sub 190

Message

Dear NCUC, As you close public comment for Duke Energy's consolidated docket E-100 Sub 190, we urge you to put communities, which includes land and animals that thrive and live without toxic poisoning and loss of habitat first; not to mention what is happening with our climate. If you don't like the words " climate change" call it whatever you want. It is naive to think that the endless consumption of man can have no effect on the planet on which we live. WE must creatively and constructively come up with and implement new solutions. The "old" way has proven it's devastation which we cannot afford as a community or as a world. Communities living in the shadow of dirty power plants have already paid dearly for our reliance on energy sources that are not clean – suffering serious harms to their health, air, and water. To ensure a just transition, a carbon plan must acknowledge the role these facilities continue to play in communities across North Carolina and ensure their voices are heard in visioning a clean energy future. Building new gas infrastructure and increasing our reliance on fracked gas to generate electricity risks climate catastrophe due to fugitive methane, threatens to saddle ratepayers with billions in stranded costs, puts us at the mercy of gas price volatility, and requires destructive pipelines that may never be permitted. We urge Commissioners to agree to a final carbon plan that is in the public interest. Please put equity, clean energy, and a swift transition away from fossil fuels at the center of the North Carolina carbon plan.

Duke is basically a monopoly. They take advantage of their customers. I was lucky enough to have Energy United as a power company in NC for awhile and they were great, not a monopoly and they worked harder. We as the people of NC need to tell Duke Power how the can increase power and it's not with fossil fuels. We are the boss. We need to tell them what we need.

I write from Henderson County, Duke Energy must take off the blinders it seems to be wearing as it pushes more and more fossil fuel power. They, and all of us, need to utilize and take advantage of the many new and clean power options available today. Please don't enable Duke Energy to lock us on to a destructive path with their old ideas. Urge them to come up with a Carbon Plan that will give us hope for our future and our children and especially our planet....no more polluting gas and coal!
