As individuals, we are doing our part by employing solar to power our homes and travel. Please keep solar as an alternative to increased energy needs. We invested in our panels in 2021 largely because of the net metering deal. Rely on solar during the day, use fossil fuel when solar not available. At the very least, those of us who invested in solar should be grandfathered in to new legislation and not made to lose our investment. Thank you.

Please don't let Duke Energy make distributed solar and battery less economically feasible. Sharing solar is the best and only feasible energy option - not nuclear, natural gas or hydrogen. We need rapid solar and battery adaption immediately.
