Our single family home was an early adopter of solar power in 2018 with an initial investment of \$30,000 to generate 80% of our home's historical power use and a plan to meet the other 20% with energy efficiencies. We made this investment for our community and environment with hopes that it would also help our home investment. Incentives and support is critical for middle class families like ours to be able to participate in providing home solar power resources for our local environment and community energy needs.

Please reject Duke Energy's carbon plan proposal and support energy initiatives that will move us towards renewable and efficient energy sources that will not lead us deeper into global warming. Thank you

Please re-consider Duke's wasteful, costly, dangerous, untested and environmentally damaging proposals and make them shift to solar, wind and other proven alternative energy sources for our future energy needs. Thank you. Cheryl McGraw Raleigh, NC 27606

Again, I exhort you to STOP Duke! The corporation that is Duke is made up of greedy, short-sighted people in power who either are incapable of understanding that they are killing the planet AND killing our own species; or.... they really just do not care because they assume that they are safe, or will be dead before the quality of life for humans drops much further. PLEASE! There is so much evidence indicating that Duke is basically terrorizing humans and helping substantially to destroy this planet and our quality of life. You have the power to stand up and stop them. Please don't let their bribes sway you any more into destroying the future for your children and grandchildren. Look around you.... we will all be miserable within the next decade if we don't quite literally STOP Duke in its tracks.

Duke's plan continues to insist on building more new natural gas plants than necessary and failing to reach the state-mandated 70% emissions reduction by 2030. As the state's only utility provider, Duke's choice to exploit exceptions to the state's climate reduction law will not only impact themselves, but all other entities in the state relying on Duke's energy mix to achieve their own climate goals. This includes major cities Raleigh and Greensboro and small college towns Boone and Davidson. It is embarrassing and unacceptable for the state's only electricity provider to be allowed exemption from the 2030 deadline considering electricity generation and use contributed to 30% of the state's emissions in 2020.

As a long time resident of North Carolina, I would like to express my concern for Duke Energy's plans to build more gas-fired power plants and urge NC regulators not to support them, but encourage Duke Energy to invest in more sustainable, climate friendly sources of energy like solar and wind.
