NC Utilities Commission, Step up! North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions.

-100 Sub 190 NC Utilities Commission, Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!

### **Message**

I am a Duke Energy rate payer and directly and personally affected by this plan. Duke energy must be held to account to eliminate carbon emissions and stop relying on dirty fossil fuels. It should invest in renewable energy. Also, Duke Energy must make the electricity system more resilient to storms and prevent blackouts.

NC Utilities Commission, North Carolina is past due for a shift in the profit-driven monopoly mindset that increasingly harms communities, drives up power bills, and makes the climate crisis worse. Many experts agree that local solar-plus-storage is the best tool we have to address the climate crisis. It is clear that the only way North Carolina can finally get aligned with the climate scientists is to rapidly expand local solar. All Duke Energy's residential, commercial and nonprofit customers can share in the costs and benefits of local solar much like we currently pay for polluting power plants – through the electric rate system.

I pay to Duke Power every month a required Renewable Energy Rider, Summary of Rider Adjustments, and a basic Customer Charge. They are asking for \$4.00 more a month to enroll in supporting generation via Green Energy locally. I want this monopoly to stop overcharging the customers when they are pulling in Billions in profits and paying their CEO a compensation packet of \$21 Million. Duke monopoly has a market capitalization of over \$77B. is this corporate greed or wealth supremacy? All my life I have conserved energy. I wish could invest in Solar power, wind turbines, EV cars, energy efficient homes, windows and doors. and a new updated grid. Duke power can commit to this green transition without fracked GAS. they need a push towards placing solar everywhere and on all sunny rooftops or parking lots. They can only do this with the utilities commission forcing them to do it. get a plan now!

NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. For ALL our sakes, REJECT Duke Energy's monopoly-driven greenwashing and pursue climate solutions that WORK, like local solar-plus-storage!!!! North Carolina has TWICE the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. IT IS WAY PAST TIME for a GENUINE clean energy transition in North Carolina – not more false solutions!!!! Duke Energy's CEO Lynn Good's total compensation package is over 20 Million Dollars A Year, and we the people of NC are left footing this exorbitant bill? She is surely not the only one at Duke Energy scalping NC citizens. This kind of leadership, one that strips its customers of choice would not be happening without the Utilities Commission's approval. Scores of scientists, solar companies and thousands of North Carolinians HAVE BEEN URGING YOU to stop Duke Energy's climate-wrecking actions!!!! Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!!!!!! TODAY!!!

Stop agreeing to Duke Energy's plans to expand fossil fuel power plants and start allowing more solar energy for the People. It should be an easy and clear decision to make it easier for people to own and purchase solar panels for their homes and businesses and be fair in the reimbursements from electricity coming from homeowner's solar grids. I'm tired of seeing the NCUC not make decisions that actually would help the people and environment.
