Dear North Carolina Utilities Commission,

I support solar and net metering in North Carolina.

Net metering provides real benefits to the grid, utility, and other ratepayers. It drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. Net metering also drives innovation and competition in an otherwise monopolized utility industry.

Please oppose any attempt to undermine these policies. Thank You.

Sincerely,

Michael Morgan

Dear North Carolina Utilities Commission,

I support North Carolina's net metering policies.

The state's net metering policies provide are fair for solar customers as well as other ratepayers. Net metering encourages competition and allow for entrepreneurship and innovation within an otherwise monopolized utility industry. It also supports job creation and investment in one of the state's fastest growing industries.

Please do not weaken North Carolina's net metering standards.

Dear NCUC Members,

It's time for North Carolina's net metering policies to be updated. Current policies result in costs being shifted to non-solar customers, like me and others in my community. And that is not right.

Clean energy is important to our state's energy future, but not when current policies create additional costs for non-solar customers.

Please fix the net metering policies so they are fair to all customers -- versus primarily benefiting those who can afford solar panels on their houses and the companies who install those systems.

Sincerely,

Anne Sheffield

Dear North Carolina Utilities Commission,

I support solar and net metering in North Carolina.

Fair net metering policies support the continued development and investment of a booming solar industry in North Carolina, while improving grid efficiencies and reducing the need for expensive power plants and infrastructure. It also drives private investment and encourages competition and innovation within an otherwise monopolized utility industry.

Please oppose any attempt to undermine the state's net-metering policies.

Subject: Statement of Position

I have heard various responses regarding sub-metering for larger master metered units. I've been told sub-metering is illegal, however our interpretation is that sub-metering cannot be done for a profit.

Is sub-metering allowed, simply as a way to equitably allocate energy usage among tenants?

Best regards,

Dan Marks

Subject: Protect net metering and solar energy in N.C. (Docket E-100 Sub 83)

Dear North Carolina Utilities Commission:

We, the undersigned, are North Carolina electricity customers. We urge you to stand strong for North Carolinians like us against Duke Energy's attempts to weaken rooftop solar rights.

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. The utility is working to keep its own monopoly grip on electricity by reducing the amount of credit that its customer receive on their electricity bills for valuable solar power. North Carolinians deserve better.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with strong net metering.
