Hello and thank you for your work.

Our family installed a 5KW residential rooftop solar system in 2014 and have since generated nearly 40MW of power. I encourage you to support the net metering system that made our purchase possible and that benefits all Duke customers.

Needless to say, we are contributing electricity to the grid at peak hours. Right now, for example, we are running our air conditioner on this very hot afternoon. Unlike our neighbors, the 3.4 KW we are using is being completely offset by the 3.6 KW our solar panels are producing. This is exactly the kind of benefit that should be factored into the net metering payment system.

Again, thank you for what you do to keep North Carolina powered and best wishes.
