Years ago, I did the right thing and invested in solar panels for my home rooftop. I vigorously oppose and change which allows Duke Energy to reduce what I am paid for contributing energy to the grid, and certainly don't think they should change after the fact. Moreover, consumers who are considering an investment of their personal funds to help the state and the world by contributing energy should be given every incentive to do so. Peter Juran

I am writing to express concern about Duke's continued efforts to undermine and complicate the transition to roof-top solar. Residents and businesses should be encouraged and rewarded for contributing clean energy to our grid. I encourage Duke to make clear, simple guidelines to solar use that any 7th grader could understand and urge our commission and representatives to do everything (from legislation to policies) that ensure businesses like Duke transition much more rapidly than at present to renewable energy.

Thank you.

Please reject the Duke proposal. I invested in solar panels because of the current way excess energy is paid for. This proposal would drastically increase the payback period on my investment. In regard to society in general, we need to be investing in more renewable energy. This proposal would reduce the amount of people that invest in solar and therefore slow our country's progress toward renewable energy.

I am 110% against Duke Energy's net metering proposal because it is exactly the wrong direction that Duke Energy is going in terms of residential rooftop solar. Duke Energy should decrease impediments for roof top solar not increase them. It is obvious that Duke Energy wants to drive residential solar into the ground because of one thing and one thing alone and that is "absolute control". Duke Energy does not have a vision that would include a centralized and decentralized grid operating in tandem. Unfortunately, its solar advocates that have the vision of a cleaner less fossil fuel derived energy future that Duke Energy wants to ultimately reduce. This does not make any sense, no matter how you cut it. Thank you for your time in reading my opinion. John P. Sorge, MD PS Duke Energy bills lack clarity and don't provide the basic data to track home solar production. In one word, the bills are non-transparent and Duke Energy must be held accountable. Duke Energy is capable of providing the data because they used to and I was satisfied with the data they were giving me. Only because it correlated with the data generated independently of Duke Energy from my home monitoring software system. Currently, I don't trust Duke Energy to be completely transparent and therefore don't trust their net metering proposal whatsoever.

Duke Energy is attempting to harm the solar industry and the environment in pursuit of nothing more than corporate profits. Duke made a net income of \$3.8 billion in 2021, a 200% increase over the previous year. It is hardly in need of extra revenues at the expense of clean, renewable energy. Rooftop solar is a vital part of a clean energy future. The gas-fired plants that Duke is proposing will jeopardize North Carolina's coastlines even further with sea level rise. Net metering is vital to the solar industry. It makes rooftop solar affordable for low and middle-income homeowners. It also was in place during the investment many of us made in sustainable energy. Changing the rules after we made this big investment isn't fair to homeowners who made a 30-year investment with the rules in place. Do not allow Duke Energy to sacrifice our children's future in pursuit of even greater profits. We need to switch to renewables, and Duke has been charging headlong in the OPPOSITE direction. This rules change would hurt regular NC citizens to benefit an already highly profitable monopoly.

I took the leap to install solar to help the environment. I even went so far as to install additional solar panels to export excess electricity back to the grid. Now, it looks like the new net metering proposal would penalize me for doing the right thing. The wholesale compensation for electricity exported to the grid would be cut to less than 1/3rd of the current rate. This will reduce my solar investment to a loss instead of just breaking even. Additionally, the time-of-use billing doesn't account for peak solar generation, and it penalizes the owners by raising the electricity rates when solar generation is at a minimum. Preferable, the energy providers should invest in power storage technologies to store the excess power during peak solar generation, then send it back to the grid during peak usage times. The proposed changes will reduce the incentive for other owners to invest in solar power production. Please do not reduce the value of investment I've made.

Duke Energy should not be allowed to lower the value of home Solar Panel energy providers (via House Bill 589). I have installed these panels on my home and I continue to pay Duke Energy for the right to remain on the grid. Not only that, Every year, I provide more electricity to Duke Energy than I use. I do not get paid for my production. I just give free electricity to Duke Energy every year. Now Duke Energy wants to charge me more based on the time of day I use my energy? Not only that, but I never use any of Duke's energy during the high volume day time, I only give back during these hours. Duke Energy should be supporting customers like me who give them free electricity not charging us more. This plan is anti-environmental as it will discourage more Solar Energy installs.

E-100 Sub 180

Message

As required by NC House Bill 589, I demand that the NCUC investigate the costs and benefits of rooftop solar before any changes to net metering are made, and that investigation has yet to be conducted. Duke Energy claims solar customers pay less than their fair share for using the grid, but that has not been proven, and some studies show the opposite. When I decided to install solar panels on my home, I did this after considering the costs and benefits based on the net metering rules that existed and the fact that time-of-use billing was not applied. I invested several thousands of dollars to support the generation of clean energy, and Duke Energy should not be allowed to change the economics of my solar investment decision after the fact. The Commission should do the cost-benefit analysis for rooftop solar that was required by law (HB 589) before changing net metering rules, and it should also consider how reducing the value of solar will make it more difficult to hit North Carolina's established climate goals.

Subject: Duke Energy Solar Plan

Dear Sir,

I have invested in photovoltaic solar in Madison County and on one of my businesses in Gaston County. My French Broad EMC pays less than half to buy back my excess. We should all be working together to encourage rooftop solar, expand it, make it more affordable and less complicated. We should be moving full speed toward clean energy. Please send Duke Energy back to the drawing board and insist on a rooftop solar policy that increases solar growth rather than hampering it, and makes it accessible to everyone, especially to low- and moderate-income households who struggle to pay their electricity bills. Please do what you can to bring back the NC State solar tax incentives and encourage the State's EMC's to offer net metering. Thank you

Please REJECT Duke Energy's proposed plan to change the net metering rules for Duke Energy residential customers in a way that would reduce the amount customers are paid for the excess solar energy they share with the grid. As a rooftop solar owner, I transfer energy to Duke Energy's grid every day. Why should Duke compensate me less than they charge me for an equivalent amount of electricity? As you know, they charge me ~\$16/month even during months when I use no net electricity from Duke Energy--so Duke Energy is making money from me even if they pay me the market rate for electricity I contribute to the grid. We should offer every fair advantage to rooftop solar owners, to encourage more people to install rooftop solar and thereby help North Carolina reach carbon-neutral status as soon as possible. Thanks for considering my views.

As an Apex town councilman, I worked with council to provide our citizens with the best solar PV net-metering program. Apex is an Electricities town and owns its own electric utility, so we are not hampered with the limitations imposed by Duke Energy Progress. Among other benefits, the town credits electricity at full retail value and does not reset the net meter each year to zero to capture energy for free on the grid as does Duke energy Progress. Duke energy's proposed net metering changes are designed to impede the development of rooftop solar. This is in opposition to what is required to reduce the carbon footprint of our state. The Net Metering 2.0 proposal by Duke Energy to both charge solar PV owners an extra utility charge while crediting electricity sent to the grid at the avoided cost is pure "double dipping". It is designed to discourage rooftop solar. I calculated what the cost to each customer would be if the Duke Energy fee were spread among all users. The cost is less than five cents per month per customer for every one percent of solar energy on the grid. This ridiculously low cost to everyone is well worth a clean energy future we all desire. Another problem with Net Metering 2.0 is the complexity of the program makes it almost impossible to determine what payback a solar PV system will provide. I urge the Utility Commission to reject the Duke Energy proposal and develop a program that will truly bring North Carolina toward carbon neutrality.

My wife and I went off grid almost two years ago, 64 Solar Panels and 5 Telsa Powerwalls. There isn't enough benefit to consumers locally to entice them to use Solar. My wife and I received 28% Federal tax credit but nothing locally. Duke Energy is a joke, we applied for \$6,000.00 rebate in 2020, 2021, from Duke Energy. Each time the goal posts were moved, and we never received our rebate. Now the rebate has dropped to \$4,000.00 in 2022 and we have given up trying to receive our rebate. Duke should be forced to buyback, our extra solar energy we produce rather than give us credits that expire after a 12 month period. None of this benefits the Consumer!

Please do not allow duke energy to change its current net metering policy. Their proposed change would subject us to an unknown price increase that sounds like it can be changed at duke energys discretion. A price increase like this would be detrimental to the solar community as well as those that consider going solar in the future. I'm sure others, as I did, made the choice to go solar with the assumption that net metering would be consistent and unchanged. Going solar is already an expensive investment. The price increase and restructure of net metering that duke energy is proposing would make it a much harder sale and take much longer for the investment in solar to pay off. Us current solar owners made a choice to go green and choose solar with promise that net metering would always be \$15 per month. Please don't allow duke energy to change this policy and jeopardize our financial well-being. Thank you.

I am writing to express my concern about Duke's proposed changes to net metering. My family of 4 pulled out all the stops a few years ago to invest in rooftop solar for our house. It was difficult, as a counselor and as a teacher raising 2 kids, to purchase solar, but it felt such an important investment in our children's future, that we prioritized solar over all other luxuries. It felt JUST affordable. Just. I am dismayed to learn that Duke Energy is seeking to retroactively change the rules regarding net metering. This feels unfair and punitive to families like ours, who are investing in the future of the planet-- trying to take actions that will benefit everyone, not just ourselves. Please don't allow any rules making net metering less affordable to families like ours who are attempting to do something positive for the benefit of all of us. We are all in this together. Let's act like it!

NCUC should perform a thorough study to determine the cost-benefit of rooftop solar before allowing any changes to be made to the net metering program Duke Energy has. The claims that rooftop solar customers do not pay their fair share have not yet been proven. Additionally, the net metering policy is in many cases the major factor in customers decisions to invest in rooftop solar. A change to this policy at all and especially after the fact (for customers such as myself) is unfair, puts North Carolina's climate goals at risk, and would lead to a loss of green jobs at a time when climate change is having a greater impact everyday on our lives.
