Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

Marian Wenink

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Velvet Key

Subject: Docket E-100, Sub83:Net Metering

NC Utilities Commission,

My name is Kathy Jooss, and my husband Rick and I live in Orange County. Last year we had PV panels installed on our roof, and we have been very happy with that decision. That decision was, however based on the availability of net metering. We DO NOT support the proposed changes to net metering that will kill rooftop solar in our state. I am against giving a power company a monopoly on energy production at the expense of other green energy producers. I want to see our state offering MORE INCENTIVES to its citizens for using and producing green energy, not taking incentives away!

Subject: Docket E-100, Sub 83:Net Metering

To: Chief Clerk of the Commission

Date: 04/30/2014

Dear Chief Clerk,

I am vehemently opposed to changes in net metering. My wife and I invested a significant amount of money to purchase and install a state-of-the-art solar PV panel system on our home in 2012. In fact, our home was designed to accommodate solar panels when it was built in 2006. The purpose of solar energy is to reduce the amounts of CO₂, methane and other pollutants inherent in primitive fossil fuel energy production. As such, our panels provide a service to the community which Duke Energy, Piedmont and other local providers cannot deliver: clean electricity.

Our investment was based upon a projected return through net metering. Piedmont has drastically reduced this reimbursement (which is a bargain to community and the environment), and at the new rate it is unlikely to repay the cost of our system. The rules have been changed in the middle of the game. Yes, we are angry and dissapointed with the Commission and elected officials who have bowed Duke's philosophy of shareholder-profits-over-health and environment.

Please keep net metering in place for North Carolinians.

Sincerely,

Michael Morrissey
