**Subject:** Docket E-100, Sub 180CS

To whom it may concern,

What is going on with this plan? I am completely confused and bewildered!

We as a nation and world are pushing toward clean energy and renewable energy solutions. The federal government is trying to encourage people to go solar. With the Green New Deal, we know that carbon taxes are coming to push more people toward green and renewable sources.

...and yet you allow Duke to effectively lower the ability of people to go with residential solar?

How much money are your pockets getting lined with in order to comply with their desires?

That is the only thing that makes sense as to why you made the decision you made.

Change this ruling. Change this policy.

Regards.
