Dear NC Utilities Commission,

As a solar roof owner I strongly urge you to reject Duke Energy's petition regarding solar roofs which would make it much harder for me to pay off my investment within the next decade.

The current rules Duke has created where all the extra energy I provide to the grid is set back to zero every year in May is already very unfair.

I urge you to improve the situation for solar roof owners by forcing Duke to never sweep my balance of kWhs provided to the grid.

The energy provided by solar roofs is the most useful to Duke as it is Summer Peak Energy, which as you surely know is the most expensive to produce as it requires building extra capacity power plants just to cover the summer peak.

So Duke should improve their efforts to compensate solar rooftop owners for the extra valuable energy they provide to the grid.

best regards,
Manuel Kleiner
