Subject: Protect net metering and solar energy in N.C. (Docket E-100 Sub 83)

Dear North Carolina Utilities Commission:

We, the undersigned, are North Carolina electricity customers. We urge you to stand strong for North Carolinians like us against Duke Energy's attempts to weaken rooftop solar rights.

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. The utility is working to keep its own monopoly grip on electricity by reducing the amount of credit that its customer receive on their electricity bills for valuable solar power. North Carolinians deserve better.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with strong net metering.

Recent analysis found that these direct grid benefits outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with strong net metering.

Subject: Protect net metering and solar energy in N.C. (Docket E-100 Sub 83)

Dear North Carolina Utilities Commission:

We, the undersigned, are North Carolina electricity customers. We urge you to stand strong for North Carolinians like us against Duke Energy's attempts to weaken rooftop solar rights.

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. The utility is working to keep its own monopoly grip on electricity by reducing the amount of credit that its customer receive on their electricity bills for valuable solar power. North Carolinians deserve better.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with strong net metering.

We, the undersigned, are North Carolina electricity customers. We urge you to stand strong for North Carolinians like us against Duke Energy's attempts to weaken rooftop solar rights.

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. The utility is working to keep its own monopoly grip on electricity by reducing the amount of credit that its customer receive on their electricity bills for valuable solar power. North Carolinians deserve better.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with strong net metering.

My own Utility Company Union Electric Membership Corporation has rules in place which have effectively eliminated residential solar benefits for consumers. A look at the distribution of small home power producers in the state will reflect regulations and local utility attempts to stifle innovation.

Distributed power production provides a buffer against frequent utility outages. My neighbors know that when the power is out in their homes, power is available in mine.

The state should lead in this important field not try to hold onto the past. My Panels will never pollute the atmosphere or our common water supply. The utilities are known to be unable to contain their deadly toxins.

Please help Solar Power provide a clean and safe energy for North Carolina. The young solar

industry in North Carolina can provide jobs and stability into the future. No worries about fuel prices causing price fluctuations. No worries about the coming carbon tax and environmental damage from burning those fuels.

Help our state lead not lag behind in energy. Support legislation which encourages local distributed solar power production. Stop those interested only in profit above all from killing the promise of solar energy.

Thanks for your time

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. The utility is working to keep its own monopoly grip on electricity by reducing the amount of credit that its customer receive on their electricity bills for valuable solar power. North Carolinians deserve better.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits

outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with strong net metering.

Dear North Carolina Utilities Commission:

We, the undersigned, are North Carolina electricity customers. We urge you to stand strong for North Carolinians, like us, against Duke Energy's attempts to weaken rooftop solar rights.

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. The utility is working to keep its own monopoly grip on electricity production and distribution by reducing the amount of credit that its customers receive on their electricity bills for valuable solar electricity production. That would allow Duke get for free what they in turn charge others for. It would allow Duke to rob individuals of a fair price on their production. North Carolinians deserve better.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits outweigh the costs by 30 percent. Subject: Protect net metering and solar energy in N.C. (Docket E-100 Sub 83)

Dear North Carolina Utilities Commission:

I am writing you to ask that you resist Duke Energy's attempts to weaken C credits to people who produce excess energy with home solar systems. We need to encourage the use of renewable energy sources rather than weaken them.

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. The utility is working to keep its own monopoly grip on electricity by reducing the amount of credit that its customer receive on their electricity bills for valuable solar power. North Carolinians deserve better.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with

strong net metering.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits

outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with strong net metering.

Subject: Protect net metering and solar energy in N.C. (Docket E-100 Sub 83)

Dear North Carolina Utilities Commission:

We, the undersigned, are North Carolina electricity customers. We urge you to stand strong for North Carolinians like us against Duke Energy's attempts to weaken rooftop solar rights.

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. The utility is working to keep its own monopoly grip on electricity by reducing the amount of credit that its customer receive on their electricity bills for valuable solar power. North Carolinians deserve better.

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. The utility is working to keep its own monopoly grip on electricity by reducing the amount of credit that its customer receive on their electricity bills for valuable solar power. North Carolinians deserve better.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with strong net metering.

Subject: Protect net metering and solar energy in N.C. (Docket E-100 Sub 83)

Dear North Carolina Utilities Commission:

Unless we take steps soon to stop the worst impacts of unfettered climate excesses that could devastate the American, and indeed the world, economy, we must stop efforts to sabotage the alternative energy industries that seem to be our only hope to mitigate climate change.

Therefore we, the undersigned, are North Carolina electricity customers. We urge you to stand strong for North Carolinians like us against Duke Energy's attempts to weaken rooftop solar rights. Where better to have electricity generated and used close to the source rather than an outdated electric grid that is inefficient and expensive, losing many units of electricity as it travels miles across this failing grid?

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering program for rooftop solar. North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Now Duke Energy has publicly stated that it wants to weaken North Carolina's net metering

program for rooftop solar. The utility is working to keep its own monopoly grip on electricity by reducing the amount of credit that its customer receive on their electricity bills for valuable solar power. North Carolinians deserve better.

Rooftop solar power delivers numerous economic and health benefits to North Carolina. Private investment in local power reduces the need for expensive and polluting conventional power plants and transmission infrastructure. Recent analysis found that these direct grid benefits outweigh the costs by 30 percent. The state's growing solar industry supports more than 2,400 local jobs throughout the state, nearly doubling last year alone. And, perhaps most importantly, rooftop solar gives North Carolinians control over their electricity bills and energy resources like never before.

As Duke Energy takes its fight against rooftop solar rights to the Utilities Commission, we hope you'll stand strong for North Carolinians and do what you can to keep rooftop solar shining with strong net metering.

Subject: Protect net metering and solar energy in N.C. (Docket E-100 Sub 83)

Dear North Carolina Utilities Commission:

We, the undersigned, are North Carolina electricity customers. We urge you to stand strong for North Carolinians like us against Duke Energy's attempts to weaken rooftop solar rights.

North Carolina ranks among our nation's top solar states, but unlike other leaders, that solar power is overwhelmingly in the hands of the utility rather than the rooftops of homes, schools, and businesses.

Subject: Docket E-100, Sub 83: Net metering

To the chief clerk of the commission:

I am a North Carolina homeowner who invested in solar panels for my home two years ago. Although I am not currently net metering, I want very much to preserve the option to do so. I therefore do NOT support changes that would make net metering more onerous or more expensive, and urge you to reject any such changes.

Sincerely,  
John Pope
