To the Chief Clerk of the Commission,

My name is Mark Ledyard. I own a business in Asheville, NC.

3 years ago we added roof top solar panels on our building. I am also looking in to adding them to an expansion we are considering.

I belive solar energy is important to pursue and would like to see the Utilities Commission take steps to encourage more solar production and usage.

I do NOT support the changes to net metering that are being proposed by Duke Energy.

Thank you for your time.

sincerely,

Mark Ledyard

Dear Chief Clerk of the Commission

My wife and I recently installed PV solar panels on our residential roof in Hendersonville. This investment was made under the current rules allowing Net Metering. The investment decision might have been different if it were not for the Net Metering. It is my belief that by installing PV solar I and other project owners are enabling Duke Energy to avoid expensive additional generating capacity. This avoided cost includes costs other than the direct generating costs.

If the Commission does agree with the Duke Proposal and alter the current Net Metering rules it would seem **Grossly Unfair** to make the change **retroactive** to include those of us who made an investment decision under the rules in place at the time.

Thank you for your consideration.

I invested in a PV rooftop solar system with the understanding that net metering would offset the cost of the panels. I need the panels to provide power in the event of an outage. I live at the coast and this is an important issue here. Changes in net metering would make this option unaffordable for homeowners.

Please do not allow Duke Power to railroad you into a change that will hurt the citizens of the state. Duke Power operates to their own self interest exclusively. Recent Coal-Ash spills are an example of their corporate self-interest. The citizens of the state need your protection regarding net metering. I Do Not support changes to net metering that will kill rooftop solar in North Carolina.

Sincerely,

Robert E. Coles

Chief clerk of the commission

My name is John Lang.

I live in Arden NC.

I have personally invested in solar energy.

I have installed a solar energy system on the roof of my home with the expectation that I would be able to continue with net metering indefinitely. This was a large part of the economic equation

I DO NOT support changes to net metering that will kill rooftop solar in the state of NC

Dear Chief Clerk of the Commission,

I am a resident of Charlotte and I installed solar panels on my roof within the last year. One of the reasons I chose to do this was the financial incentives available to me through net metering. If net metering is changed, it may disincentivize some people to pursue solar power. I Do Not support changes to net metering that will kill rooftop solar in our state. Please oppose any changes to net metering.

Thank you for your time and consideration, Frank Lorch

Dear Chief Clerk of the Utility Commission and Mr. Murray,

My name is Praneet Athalye. My wife and I are proud owners of a rooftop PV system, second in Morrisville, since three years. We invested in solar believing in net metering. We would like to see solar on rooftops of various community houses in order to have a better future for all of us.

I recently learned about some changes. I do not support changes to net metering that will kill rooftop solar in NC.

Please do your best in your authority to support the growth of solar PV generation in the state.

Regards,

PRANEET ATHALYE
MORRISVILLE, NC

Dear Chief Clerk of the Commission,

My husband and I are residents of western NC. We recently installed solar panels in our home/place of business. A large incentive for doing so was the net metering agreement with Duke Energy/Progress. We are strongly interested in preserving our option to generate our own power, instead of being reliant on large monopoly power companies.

As such, we DO NOT support changes to the net metering that will kill rooftop solar in the State, and are asking that you oppose changes to net metering.

Thank you,
Aparna Keshaviah, Sc.M.

Hi,
We are Allen Cowan and Vivian B. Lord, two citizens who are conservationists.
We spent nearly \$21,000 for solar panels for a couple of reasons.
One, we can use less electric.
Two, by doing this we are savings trees and reducing pollution.
Three, because of net metering, we projected long-term savings on our utility bill.
If you change the current formula, it will be a deterrent to folks considering solar panels.

WE DO NOT SUPPORT CHANGES TO NET METERING THAT MIGHT KILL ROOFTOP SOLAR IN NORTH CAROLINA.

Regardless, many thanks for listening.

N.C. Utilities Commission

Chief Clerk of the Commission:

When I invested in a 4.8 kw rooftop solar PV system last year, I did so with the understanding that I would be able to net meter. In fact, all of my break-even calculations were based on my ability to continue net metering for the foreseeable future. However, I understand there are some proposed changes that could prevent this from happening.

I DO NOT support changes to net metering that could kill rooftop solar in NC, and ask the Utilities Commission to oppose changes to net metering.

Respectfully submitted,

Peter Winkler

As a green energy supporter and solar rooftop owner, I urge your organization to support Green Energy initiatives in our state.

Solar power is great for the environment and the people who produce a portion of their own power. I also encourage you to support net metering by our utility companies. Our power companies like to present an image of being supportive of environmentally sensitivity issues but then do not follow thru with actions that support their words. We only live on this earth and we need to really care about the condition it is in and will be in during the future. Please consider reasonable environmental practices in future planning and stewardship of our state.

Joe Mashburn
