E-100 Sub 190

Message

Please stop Duke Energy blocking genuine progress with residential and shared solar. Duke and the Commission need to be encouraging solar technology over traditional fossil fuels, not actively blocking it! Thanks you.

E-100 Sub 190

Message

PLEASE stop Duke Energy's risky plan for future energy production for North Carolina. It is too expensive and will take way too long and is Unproven technology dependent. The time is NOW for SHARED solar and alternative energy production. Please investigate NC Warn's research as relevant and an important contribution for North Carolina energy production. Thank you, Cheryl McGraw

I am fully supportive of the "Sharing Solar Plan" and wholeheartedly against Duke Energy's plan to build more fossil fuel power plants. Duke energy's plan does nothing for local local communities long term, it's too expensive, it just adds to an outmoded centralized electricity distribution rather than a more efficient distributive electricity distribution and it furthers the negative impact on the environment by significantly adding to greenhouse gas emissions. I feel I can speak of these matters directly, since I am a decades long term solar customer of Duke Energy and I can testify that my "home solar system" works well for myself and my family. I stress that it works very well and therefore can support the "Sharing Solar Plan". Thank you.

Duke Energy is trying to block genuine solutions to our energy problem. You have the power to stop helping Duke do this. Local solar-plus-storage (SPS) is the fastest, cheapest and fairest way to meet our climate goals. Solar farms are now less expensive than new gas- or nuclear-fueled power plants. Sharing Solar would expand the solar market to low- and middle-income homes, citizens and businesses by eliminating the direct cost of installation; instead, the costs and benefits would be shared with all customers

Message

The NCUC should be a proponent for North Carolina citizens rather than one for Duke Energy's proposals that directly harm North Carolina residents. NC WARN's proposal for sharing solar makes much more sense than Duke's plans to continue to build fossil fuel plants and make North Carolina residents pay for them with increased rates and increased CO2 emissions. Please make sure that the sharing solar proposal is accepted and implemented.

as an interested and active citizen and supporter of smart actions to provide power to the people in North Carolina, I'm very disturbed by Dukes recent actions to make it more difficult to deploy rooftop solar and battery solutions here. Please encourage Duke to work toward a smart power sharing set of solutions rather than continuing to invest heavily in outmoded Generation strategies.

I am writing to ask the Utilities Commission to reject any Duke Energy Plan that fails to prioritize and incentivize protection of ratepayers by facilitating the cheapest form of electricity generation with the fewest environmental impacts: solar plus storage. Members of the Commission have an obligation to act on the public's behalf, including the public that is coming in next generations who face the worst aspects of climate change. The Commissioners are in the best position to challenge Duke on its basic business model of dependence on fossil fuel sources that will leave ratepayers and taxpayers exposed to massive costs from externalized pollution costs. I ask that members of the Commission work hard to make Duke submit a better plan, one that incentivizes and accelerates rooftop solar and distributed generation. Thank you.

Message

Duke Energy has terrible plans for future generation power. The evidence presented for the obvious alternative (Local Solar-plus-Storage) is overwhelming, and the idea that Duke Energy cannot be considered to represent the public interest at all hardly needs to be supported. Please reject Duke's self-serving proposal for methane-based electricity generation. A rapid up-scaling of solar is a demonstrably better option.

Sharing solar is the fastest and cheapest way to address NC's impending climate catastrophe. Sharing solar is fully proven, has a short lead time, and provides maximum resiliency in extreme weather conditions (pg. 33). I can attest, as a homeowner with solar panels, that NC has excellent solar installers to meet the challenge. Duke's proposed "small" nuclear reactors, switching gas-power to hydrogen and controversial new transmission corridors with giant solar farms would all take decades – if ever – to complete. Duke has never addressed how they would deal with nuclear waste.... I urge you Commissioners, to adopt sharing solar! Listen to us on the ground, and NC Warn. We have solutions for you that work. Thank you.

I urge you to support the "Sharing Solar" proposal formulated by NCWARN. It is both realistic and also achievable, unlike the proposals of Duke Energy, which are dedicated to preserving their corporate economic interests at the expense of NC citizens. While understandable, we must remember the observation of the insightful author Upton Sinclair: "It is difficult to get a man to understand something, when his salary depends on his not understanding it." Thank you, H. M. Jones, MD
