I am against Duke's proposed changes to North Carolina's solar energy policy. Raising the costs for people to do the right thing and decrease our dependence on fossil fuels that too often have our country beholden to autocratic foreign powers is inherently bad policy. Not to mention it puts us behind in our targets to reduce carbon in the atmosphere. North Catalonia should be a leader in new and innovative forms of energy and not chained to outdated models that don't serve future generations.

**Subject:** Save Rooftop Solar

Rooftop solar is an essential component in the struggle to reduce our dependence on foreign oil and on fossil fuels in general, but Duke Energy is proposing rules changes for solar power that inhibit homeowners' ability to participate. No wonder most solar companies—and homeowners like myself who produce solar power-- oppose Duke's plan. Please ensure that Duke Energy aid rather than hobble the expansion of rooftop solar.

Thank you,

As a citizen of NC and customer of Duke Energy, I strongly oppose changes to net-metering rules that would discourage individuals and families from investing in solar energy. At exactly the time we need to be ramping up renewable energy, this would slow down investment, and it is clear that Duke Energy knows it.

Consumers that already have rooftop solar (like my family) would suffer; small businesses that install solar would suffer; and Duke Energy would build more natural gas power plants that add to our state's carbon footprint. It is lose, lose, lose.

I ask you to support the growth of solar and not support changes to the net-metering rules.

I oppose changes to net metering. We plan to install solar the next time we do our roof (about 2 years from now), and will not do so unless net metering rules remain in effect. Do not let the Duke energy company proposals go through!
