Utilities commission:

Please do not allow Duke Energy to raise our rates. Duke wants it's power users to pay for their expansion of methane producing natural gas which they are calling sustainable- it's not!!! They Also want us to pay for the cleanup of their coal ash debacle and they want to make a profit on that as well.

They are one of The biggest energy companies in the world and their proposed expansion of climate racking fracking is the opposite direction that we should be going. There is so much solar power Available now but they don't want to get on board with solar and wind because they have already invested so much in fracking and natural gas. You can help steer things in the right direction. Thank you for listening.
