Dear Commisioners,

As a rooftop solar owner and customer of DEP, I have continuously been disturbed by their efforts to slow the use of roof top solar. They have made every effort to complicate billing and get free power from solar users already by clearing credits at the most opportune time for themselves. They have worked actively to delay delay the ability for us to combat climate change and have a more resilient energy grid. For the past several months DEP has not even managed to get my solar credits correctly credited to my bill, nor send me my monthly statement of production. To think that you would consider allowing them to make this process even more opaque is troublesome. I urge you to protect the utility consumers in this state and stop DEP's attempt to make rooftop solar more expensive for consumers.

Sincerely,
Irene M Rusnak

Hello,

Please encourage residential solar. Please remove any barriers to its use and do not add any new barriers.

Sincerely,

James Schall
Buncombe County

This rule change is plain and simple theft from individual customers by Duke Energy. It moves North Carolina away from the urgent task of cleaning up our environment. So decision makers, stop Duke Energy's underhanded attempt to keep all ratepayers addicted to them! Stuart Matthews, Angier, NC

I am opposed to the change Duke Energy proposes with regard to homeowner solar panels. Anything that makes solar power less attractive to citizens is a disservice to the future of NC. We need more people adding solar energy to the system, not fewer, and the billing method that Duke is

seeking will discourage many people from adding solar power to their everyday lives. Additionally, the present owners that have invested money in rooftop solar may face a reduction in home values. Please say NO to Duke's proposed rate changes.

Thank you, Aaron Honeycutt. Pittsboro, NC

To whom it may concern,

North Carolinians want more roof top solar. We want more renewables period. Duke energy is trying to fee and confuse their forced constituents into capitulation because they want to build new gas power plants. If we want to continue North Carolina's economic momentum we have to stop shooting ourselves in the foot with the younger generation and the planet writ large. More gas power plants and more pollution are only helping the gas industry. How about we help the citizens of NC for a change and do what's right for us? This starts with not let Duke Energy tax citizens out of roof top solar.

Thank you,

Jason Campbell

Hello,

My name is Randy and I have installed solar panels on my place of business and I am planning to have solar on our new home that is currently under construction. I understand that Duke Energy has filed a petition with the NC Utilities Commission to change the rules on net metering, making rooftop solar less accessible at a time when climate scientists say we must be moving more strongly to decarbonize our world. North Carolina is already behind other states with regard to net metering benefits for the public. Help improve our net metering policies.

Thank you
Randy Wetzel

I am a resident of Raleigh, NC. I am very worried about the climate, mass extinctions, and our planet.
We must protect solar power as one way to try to avoid ruining our planet for human and animal and plant life.
I am old -- 76 -- but I have 2 granddaughters, aged 21 and 18, who are ready to launch out on their own to make the world a better place.
Please keep solar power as one of our choices.

Our current solar policy has helped to expand the use of solar power by homeowners in North Carolina. Duke Energy's proposed changes would make rooftop solar less affordable and more complicated at a time when we should be moving full speed toward clean energy.

Please send Duke Energy back to the drawing board and insist on a rooftop solar policy that increases solar growth rather than hampering it, and makes it accessible to everyone, especially to low- and moderate-income households who struggle to pay their electricity bills.

It appears , that Duke is building solar farms with the money they get from the overpriced power bills. Now they want to stop individual consumers, from having their own sola panels . It's time for the Governor to think about North Carolinas.

Please Reject the current proposed rule changes for solar net metering.
These proposed rules changes for solar power will inhibit homeowners' ability to participate and diminish our efforts to decrease carbon emissions in North Carolina.
Please insist that Duke Energy aid rather than discourage the expansion of rooftop solar.

Thank You for considering a brighter future for North Carolina,

Norm Brown
Durham county resident

As a Duke customer and concerned citizen, I would like to register my strong opposition to Duke Energy's plan. It is nothing more than an attempt to undermine solar power usage by citizens, while promising only a very weak commitment on their part to cleaning up their dirty energy. Their money and power should NOT dictate the health and well-being of any of us.

Duke's complex plan would reduce solar payback and harm all Duke Energy customers, solely, as usual, for Duke's own profits. This company has a long history dirty energy and overcharging customers. We pay for Duke to spend literally millions on false advertising about what a green company they are becoming, which is well-documented as being quite the opposite in fact.

Duke's proposal would make the solar payback worse for every solar household - especially those of lower income. And it repeats the long-running demonstrably false claim by Duke and the Koch brothers that net metering forces the poor to subsidize high income solar customers.

Duke offers confusing options for solar customers and ultimately forces them onto their new scheme.

WHY is Duke Energy even allowed to have input that such a negative impact on North Carolinians? Duke has everything to gain by stopping development of household solar energy. They do not care that their company is responsible for so much pollution, with it's associated lowering of quality of life for all of us. Their shareholders seem not to care about being able to breathe in 10 years, or the fact that Duke Energy's practices are dooming us all to poor quality of life within just a decade. Even now, we are seeing dramatic impacts. Why it is even legal for Duke to continue to operate the way they do is shameful; and obviously they are paying off a lot of politicians and regulators to make it happen.

The NCUC is our only hope to curb the monopoly that is Duke Energy from grievously harming all of us. Please consider what is best for the people, not for this antiquated, greedy, ignorant company. Please do your job and remember your own kids and friends want to be able to breathe and enjoy clean water and quality of life too. We are at a horrific crisis on our planet, which humans, like Duke Energy, have caused. Please PLEASE do your job and stop them.

Thank you
