E-100 Sub 190

### Message

My commitment to protecting the environment is demonstrated by my purchase of solar panels. Since the time of my purchase, it seems that Duke has been persistently trying to take away the benefits that will protect my investment. Duke's greed is further adding to climate problems. Please, please, please stop Duke from blocking alternative energy such as solar and wind energy.

E-100 Sub 190

### **Message**

Duke's current natural gas expansion plans will kill any chance of reaching their future emissions target!! Please replace the majority of their natural gas expansion plans with renewables! Additionally, please stop their blatant efforts to kill residential, commercial and government solar by making Net Metering totally not economically feasible. Duke's plan to ultimately switch all these gas plants to hydrogen: a, Demand a couple "proof of concept" plants immediately!!! b. Compare the cost of the additional renewables, water and infrastructure required to operate these plants to the cost of producing the same amount of electricity directly with renewables + storage.

### **Message**

Electricity from solar and wind energy is so much more cost efficient than fossil fuels, once the infrastructure is in place. The future is in renewables and consumers prefer clean energy. Plus, clean energy is creating more and more jobs every day. Please craft policies that will help Duke Energy's customers to share in the costs and benefits of clean energy so that we all win. Scores of organizations and businesses already support the proposal.

Duke's plan continues to insist on building more new natural gas plants than necessary, imposing artificially low limits on new renewable connections, and failing to reach the state-mandated 70% emissions reduction by 2030. Such a plan would of course lock in fossil fuel infrastructure and its associated GHG emissions for several more decades to come.
