Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

tyler wakeman

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Dear Chief Clerk of The Commission,

I have invested in roof-top solar believing that I could net meter. I do not support changes to net metering that will kill rooftop solar in The Great State of North Carolina. I ask you to oppose these changes to net metering. I feel that this is merely an attempt by the big energy business to kill the small provider and protect their monopoly on power and rates. Thank you very kindly.

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in

clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

martha schwartz

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change. My husband and I have just contracted to have solar panels put on our roof. I know my state will do the right thing in supporting solar energy.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Heather Blackwood

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy.

So far this year we have lost power three times, including TODAY! The first time was during the fierce wind and ice storm when we went FIVE days without power, water and phone. Last week we heard five booms as transformers blew. When the power came back on the TV was blown and the microwave as well. In addition we had to have an electrician come re-wire the kitchen. The wires had shorted and half the house was without electricity.

We didn't realize about the wiring until 7:00 pm when we tried to turn on lights. The electrician came at 9:00 pm and the next day.

This morning when we heard three booms we ran to unplug the new TV and microwave. The power was out 3 1/2 hours. Last week another tree fell on the lines after it rained Monday. We haven't heard what it was this morning.

I am tired of the control Duke Energy has in this state. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I'm writing to you today in support of the ability of home owners to supply excess electricity to public electrical transmission systems and receive compensation for it (net metering). Fair net metering policies ensure that customers receive fair credit for their contribution of electricity to the grid. I belong to a cooperative energy supplier and my rate of return on electricity to the grid would be about 4 cents per KW, while I pay about 13 cents per KW + the facility fees and expenses. These policies could be very complicated by the time the energy was contributed (off-peak or on-peak) and your view of whether the customer should pay the cost of transmission lines. I believe the electrical lines are already paid for to get the electricity here, and not charging those fees would promote solar power. Those transmission fees are what lower the price I would receive to 3 or 4 cents per KWH.

Thank you.

Sincerely,

Todd Miller

Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Stephen Dawkins

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving

fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way. This insanity about fossil fuels is getting far too out of hand. It's long overdue to move to cleaner systems. The Earth is being destroyed by Climate Change. As a 100% service connected disabled veteran I find this blocking by Duke Energy to be not in the best interests of mankind nor the people of North Carolina. If anyone in the Federal or state government can't do what is right then they need to resign. The science is open source and there is not more debate. However due to the massive propaganda campaign being run of Fox News, The Heritage Foundation, Ameripac, and others sadly far too many Americans are still in denial about the facts and voting for the wrong people.

In all my studies of the internet, I have yet to find one scientific organization that deals with the earth and seas that does not officially state the excessive fossil fuel / CO-2 emissions are wring the planet beyond any past natural warming cycle. Only propaganda and corruption in Government prevents positive action. This Nation long ago should have taken the world lead in this time critical and vital issue.

Please do not weaken North Carolina's net metering standards. In fact they need to be strengthened and long overdue. If you cannot in your conscious do what is right, then at least resign your office and allow someone who will to step in.

Thank you.

I have solar panel. I participate in Duke's Time of Use Rate and net metering. I also have an electric vehicle. Reducing emissions and switching to low carbon energy supply is a critical responsibility for every person. Duke Energy should be required to pay homes with roof top solar more for the clean energy that is generated and sent to the grid than they currently pay to compensate solar producers. I feel that Duke Power is harming the renewable energy market by this attempt to attack net metering in North Carolina, and or to charge more to families who install solar. I feel that Duke Energy may make it harder for me to realize my return on investment in my solar panels. Energy efficiency and renewable energy investments will reduce the amount of energy that each customer purchases from Duke Energy, but it also reduces the cost of environmental and health care.

I have been disappointed in the lack of programs to help low income families with energy efficiency upgrades such as providing insulation and reducing leaks from HVAC systems? Duke Energy says that is left up to the Municipalities. Yet - Towns get tax revenue from the energy that is used within their boundaries, so they don't have much of an interest in reducing electricity use. Why doesn't Duke Energy provide more information to homeowners using information from their smart meters on how to shift their consumption to times of the day when there is less of a demand for energy. That would reduce the need for additional expansion in power plants to accommodate peak power. Duke Power needs to be innovative, efficient, and respectful of the environment and to switch to more reliance on renewable energy resources. They need to manage the cost for their grid infrastructure in another way other than by harming the renewable, clean-tech sector, which are bringing good jobs and good health to the State of North Carolina.

Thank you.

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water,

threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

j h

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

sherra franklin

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

My small town gets its electric power from Duke Energy: during the winter, my electric bill went over \$700--for just one month! (And I keep my thermostat at 67 degrees in the winter months.) As a senior citizen on a fixed income, I'm definitely considering either solar or wind power as an affordable option.

Please do not weaken North Carolina's net metering standards. I'm sure you don't want to find a lot of poor and elderly folks going without heat next winter.

Thank you.

Sincerely,

JC Honeycutt

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

Virginia Price

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Jeffery Blanton

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Carmine Mann
