NC Utilities Commission, Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!

NC Utilities Commission, United Nations Secretary-General António Guterres said recently that world leaders must quickly find “an exit ramp off the highway to climate hell.” Despite the horrifying weather disasters pummeling civilization this summer, Duke leaders plan to greatly expand their use of fossil fuels, gamble our future on high-risk and super-costly transmission and failed nuclear technologies, and suppress clean energy climate solutions. There is no chance of North Carolina helping avoid Guterres’ “climate hell” without a rapid and large expansion of local solar-plus-storage.

Dear NC Utilities Commission, United Nations Secretary-General António Guterres said recently that world leaders must quickly find "an exit ramp off the highway to climate hell." Despite the horrifying weather disasters and record breaking heat waves pummeling civilization this summer, Duke leaders plan to greatly expand their use of fossil fuels, gambling our future on high-risk and super-costly transmission and failed nuclear technologies, as well as more fracking and pipelines... serve to suppress clean energy climate solutions. Let us create solar or wind solutions with significant energy storage as suggested by SharingSolarNC.org, rather than Duke energy's plan to push the state (and planet) toward Climate Hell. I'm a Clayton resident who prefers that the planet not cease to support life. I am buying an Aptera solar-powered (with electric back up as needed) car as soon as they are available at the end of next year. I have supported that company also. But many people can't afford a new car...please make solar energy more accessible for all! Anne Hemingway Feuer

NC Utilities Commission, North Carolina is past due for a shift in the profit-driven monopoly mindset that increasingly harms communities, drives up power bills, and makes the climate crisis worse. Many experts agree that local solar-plus-storage is the best tool we have to address the climate crisis. It is clear that the only way North Carolina can finally get aligned with the climate scientists is to rapidly expand local solar. All Duke Energy's residential, commercial and nonprofit customers can share in the costs and benefits of local solar much like we currently pay for polluting power plants – through the electric rate system. I CURRENTLY PARTICIPATE IN THE POWERPAIR PROGRAM. Duke Energy did EVERYTHING in their power to limit the size of my system so I would be of minimal competition to their business. We need a change!!! Since my system was commissioned in April 2024, my neighborhood has lost power on two different occasions for nearly 8 hours at a time. I was not affected due to my solar panels and Tesla battery. It's time for North Carolina to take advantage of the sun and distributed power to limit the effects of interruptions in service. Duke's unwillingness to change is damaging our environment.

Please, do not allow Duke Energy to continue to block proven methods for decreasing carbon emissions utilizing clean energy. The current Duke Energy proposal seeks to lock us into expensive programs that may not offer the return on investment that is already possible with clean energy techniques, such as solar-plus-storage systems. Please consider more options beyond the suggestions given by Duke Energy. Multiple options have been suggested by Non-Governmental Organizations and research facilities, such as the Rocky Mountain Institute and The University of Texas Austin.

NC Utilities Commission, North Carolina is past due for a shift BACK TO COMMON SENSE, AWAY FROM THE FAKE NEWS, FAKE NON-PROFIT, INEFFICIENCY DRIVEN mindset. COMMON SENSE increasingly HELPS communities, drives DOWN power bills, and makes the climate crisis BETTER BY NOT WASTING MONEY ON BOONDOGGLES!!! AT LEAST THIS EXPERT (MD/PhD, in chemical engineering, trained in Pulmonary/Critical Care Medicine, years of experience in both academic and industrial research, professional engineering experience in industry, and professional healthcare experience for the people of North Carolina, researching both industrial air pollution and particulate deposition in and clearance from the lungs) DISAGREES WITH THE CONTENTION that local solar-plus-storage is the best tool we have to address the climate crisis. It is clear that the only way North Carolina can finally get aligned AGAINST THE FAKE-NEWS climate scientists is to rapidly RUN AWAY FROM THIS WASTEFUL IDEA OF EXPANDING local solar. All Duke Energy's residential, commercial and nonprofit customers can share in the COST-SAVINGS, COST AVOIDANCE, and benefits of AVOIDING WASTEFUL SPENDING ON local solar. EXPAND INVESTMENTS IN LESS POLLUTING CLEAN FOSSIL FUELS, NUCLEAR, AND OTHER MORE EFFICIENT POWER-GENERATING PLANTS TO SAVE MONEY FOR THEIR CUSTOMERS!!! DON'T BANKRUPT OUR UTILITIES AND THEIR CUSTOMERS.

NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions.
