Subject: I DO NOT SUPPORT CHANGES TO NET METERING - ROOFTOP SOLAR

Our names are Gregory and Helene Rountree. We live in Winston Salem, NC. Helene is retired and I still work. We invested in rooftop solar last year believing we would be able to net meter, to reduce our electrical expense. I DO NOT support changes to net metering that will kill rooftop solar in the North Carolina. I am asking the Utilities Commissions to oppose changes to net metering.

Thank you,

Gregory Rountree

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Phyllis Swank

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

Laura Chamberlain

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I write in support of North Carolina's strong net metering policies.

Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

It is a key step toward energy independence

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards. That move would suppress solar power in our state.

Duke Energy has huge profits --\$2.7 billion in 2013 and no Federal taxes -- without weakening net metering.

Thank you.

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

Joseph Reardon

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Damon Hearne

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the

grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Carlo Quagliaroli

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Catherine Mitchell

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Brian Vincent

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Cristine Marshall

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

In years past we used to pay extra to the power company to support clean energy. Now we have a small system that sends some of its power back to the power company for them to sell to people like we used to be. (This is my truth in advertising state, so you know I'm not just a passive bystander to the debate.)

My view is the NC would be a much nicer place to live in 10 years if solar electricity took off with clean power being generated all over the grid rather than just dirty power at a few power stations. To encourage that vision we need to make sure the utilities treat the people generating their own little bit of power and a little extra fairly.

Please oppose any attempt to undermine these policies.

Thank you.

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Mike Spruell

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Mary-Jo Paull

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.
