Message

As proud owners of solar panels, we urge you to stop Duke Energy's plans to cripple solar panel sales in our state for the sake of their profits. It's our climate, our weather, belonging to ourselves and our children and grandchildren, not to Duke Energy. We urge you to reject Duke Energy's self-serving plans and create rules that work for our future.

Message

Please oppose Duke's plans to gamble on high-risk, super-costly experimental technologies and greatly expand the use of methane gas for power generation. This is NOT the direction we should be headed in. NCWarn has outlined the many reasons we should instead be expanding local solar-plus-storage (SPS). We need to act now! Mike Maloney

I'm a Duke Energy customer from Charlotte, NC. Please reject Duke's Carbon Plan because it delays the 2030 carbon reduction deadline by five or more years. At the current stage of the climate crisis, with people already dying from extreme heat, weather, and droughts, that's too much time to waste. If approved, Duke's plan would set too slow a pace for the development of clean energy solutions like wind and solar power – while doubling down on unreliable, polluting gas plants and over-relying on expensive, speculative technologies that will likely remain commercially unavailable for decades to come. North Carolinians deserve better.

I demand you REJECT DUke Energy's plans. I am sick and tired of Duke running a monopoly on our energy here in NC and making it harder for people like me to own and provide solar energy (SPS) for myself. We are already BEHIND the curve on trying to avert the worst of the climate crisis on our hands. The people should be listened to and we demand an immediate switch to clean energy NOW!

I am writing to encourage you to reject Duke Energy's carbon plan proposal for NC's electricity needs. We should instead be promoting solar-plus-storage (SPS) in addition to other renewable energy sources. Duke's proposal perpetuates dependence on Duke Energy, and is wholly inadequate in meeting the need to reduce fossil fuel use. Rooftop solar makes so much sense for NC. Please reject Duke Energy's disastrous proposal.

Message

I implore you, the Utilities Commission to reject Duke Energy's climate-wrecking plans and pursue climate solutions that work! Rooftop solar has provided our family in Charlotte clean energy for over 5 years and it was a seamless transition. Now instead of paying our large Duke Energy bill, we pay them a little and pay down on the loan that financed our solar. We're part of the solution and that feels good.

Local solar-plus-storage (SPS) could expand across NC quickly, inexpensively and equitably – with priority given to disadvantaged communities and emergency facilities. There's no cost for customers to add SPS; it would be funded through the rate system – just as we now all pay for dirty power. All homes, businesses and nonprofits benefit – even if they don't have solar. Solar companies grow, creating thousands of jobs in small towns and cities. Sharing Solar would improve resiliency and provide backup power during outages. It avoids the constant rate hikes and the high risks of current plans.
