

## Eagle Creek Residents in Support of Gravity Replacement

For 20 years the vacuum sewer system at Eagle Creek has been plagued with problems. September 2020 marked the start of severe outages often lasting many days. While upgrading the vacuum sewer system could solve many of the existing problems, the system still has a fatal design flaw of one pit outage having the ability to bring down the entire system. Critical parts in the vacuum pits (valve, controller, etc.) will need to be replaced as recommended by AirVac every 10 years. This means a large capital outlay will be needed every 10 years. Whereas a gravity system will function with minimal maintenance and capital outlay for 50+ years. The gravity system will cause disruption to the neighborhood; however, any problems caused by construction will be required to be remedied. Gravity will provide a reliable, long term solution to the sewer woes of Eagle Creek.

### Conditions of Gravity Installation:

1. Mitigation measures for lessening the impact to homes while digging next to foundations.
2. Guarantee of restoring the disturbed areas to existing conditions.
3. Follow an industry standard maintenance schedule.
4. No increase in rates for 3 years.
5. Ensure an independent, fulltime inspector is onsite to ensure quality of construction.
