Please do not let Duke Energy push the state in the totally wrong direction for the environment. We need to reduce greenhouse gases not promote them.

Duke Energy's current proposal is not just catastrophic for consumers and our rapidly deteriorating climate, it is just plain bad business. The cost to our state economy by going backwards instead of innovative solutions to our grid future is bad for current businesses and will deter any future investments for other businesses. Speaking as a part-owner of a small manufacturing plant, please reject Duke's plan.

We the little people of North Carolina hope for a future in which we are not baked to death each summer. Duke Power has the ability to arrange our future. They are aiming in the wrong direction: more use of fossil fuels is not the way to allow the young of the state to have a future. Solar energy is the way to go. Please do not listen to their flights of fantasy; pull North Carolina back from the brink. Thank you. Peace, Bob

It's really hard to have faith in the NCUC - you don't seem at ALL interested in the reality that Duke Energy is leading us to climate hell - and you're the DEMOCRATS! A lot of good that has done. I honestly am sickened by your lack of concern, your willingness to cut out interveners (docket M-100 Sub 218) and your utter ignorance of where we are headed re: climate in a very short time. A RISE OF 3 DEGREES C IS ONLY 20 TO 25 YEARS AWAY. Do you care so little about the future? About your own children and grandchildren? Are you hot enough yet? Have enough people died in places like India and southeast Asia? Not yet? Still want to give Duke all they want re: fantasies of SMRs and nuclear? (and oh yes, nuclear is CLEAN RENEWABLE energy, didn't you know??) I'm glad I'm old, I've been in this fight for 20 years, and regulators are getting worse, not better, while the utilities are frankly apocalyptic.

I do not understand the NCUC. The people of North Carolina should be your focus, yet time and time again you seem to bend the knee to corporate Duke masters. Eyes are increasingly on you and your actions. It's time you worked for the people and not for Duke Energy. Shared Solar is the way forward. Please do the right thing.

Dear North Carolina Utilities Commission: Do NOT allow Duke Energy to have the green light to build more fossil fuel plants. We have enough and Duke Energy should move away from fossil fuels due to the climate crisis going on in the past to the present and the future. DO NOT PASS THIS DEVASTATING CARBON PLAN!!! Sincerely, Paul Kim

I strongly oppose Duke Energy's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation. There is an urgent need for a shift to renewable power, including more solar-plus-storage on homes and businesses. We are in a climate crisis, and Duke Energy's plans are making it worse.

The need for the environment is away from carbon based fuels. Away from coal ash pits and the ruptures. Away from more CO2 pollution in our atmosphere. Since the 70's the gasoline companies knew what burning carbon was doing to the atmosphere. But, like getting people off of cigarettes and cancer - existing powers want to continue with their proven and known cash flow systems. The future electrical system is grid size batteries, solar and wind. Thank you.

Duke's plan to increase methane gas production and discourage renewables will make Earth uninhabitable for our grandchildren. The scenarios are scientific. They are not in question. As it is, severe conditions will occur. Many people and species will suffer and die. Thinking about short term profit over long term survival is psychopathic. Stop!

In North Carolina, one of the largest of those corporate godfathers, Duke Energy, proposes to greatly expand fossil fuel use while strangling the fastest, cheapest and fairest path to slow the crisis: rooftop solar-plus-storage (SPS), also known as local solar and distributed generation. It is clear that the only way North Carolina can finally get aligned with the climate scientists is to rapidly expand local solar-plus-storage. All professed leaders must stop pretending that Duke Energy bosses' (pro) Carbon Plan is moving this state toward decarbonization.

I wonder what it takes for those who have an unjust amount of power, wielding it relentlessly even amidst public outcry and opposition from so many? Regardless of whether you deny the impacts of climate science or not, it does not take a scientist to use common sense that this reckless extraction and exploitation of the Earth we all call home, has dire consequences at some point. The tipping point has been here for quite sometime and becomes glaringly more apparent every day. Man is not greater than Nature. We are of Nature. The amount of power corporations are given is beyond disgusting. How devoid of meaning and authentic connection does one have to be to continue on such a devastating path of destruction? As I write this, I look across the ocean along our NC coast. I wonder in my lifetime what is to come of the sacred refuges that Nature so generously provides us. How tethered the landscapes and seasons are woven within our fabric of being, I wonder what anchoring memories from our childhoods and our elder generations reverberate through time. Can they beckon us back into right relationship? Can we heed the calls of our indigenous brothers and sisters, such as those amplifying the catastrophes like 7 Directions work? Do you not notice the dimming of the fireflies and so many of our nonhuman kin in this deep ecology? Regardless, the people will always resist and fight back. We will continue to protect and take what measures we must to not let the stories of our times die in vain. May our cries echo and find your dreams, may they disrupt your egos and numbness.
