Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Judith Porter

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Pat Seibert

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

Alison Mellander

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I do not support North Carolina's strong net metering policies because they do not allow us to be completely off the grid.

It is encouraging private investment in clean energy, but the state's existing policies hamper North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment. It also drives many away from residential solar energy because it doesn't allow for total separation from the grid.

I say eliminate Net Metering and replace it with huge tax incentives that will make solar energy even more attractive to homeowners.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please eliminate North Carolina's net metering standards and replace them with tax incentives that will allow residential customers to be totally off the grid.

Thank you.

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Jennifer Poliquin

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar

capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Ann Berry

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Subject: Docket E-100, Sub 83: Net Metering

Chief Clerk of the Commission,
My name is Michael Roberson and my family live at 2306 Anderson Drive in Raleigh North Carolina. My contact details are 919-931-8853 and mtroberson@gmail.com

Our family invested in a solar 4.2 kW PV array when we renovated our home in 2011. We added a solar hot water system with electric back up as well. We have an ideal south-face unobscured roof.

I oppose the proposed changes to net metering in North Carolina. The electricity generated by our PV panels is MORE valuable than the standard retail price. The reason is that our panels generate electricity during mid- and late-day in the peak summer demand period. Our generated electricity reduces the peak loads which is critical in slowing the peak demands. It would be unfair to penalize me as a responsible consumer when my actions and dollars are helping to reduce peak demand. That have value!

I believe that changing the net metering rules would discourage consumers like me from adding solar PV systems which can be a viable addition to our overall energy supply.

Please feel free to contact me.

Michael

You know what they say, "If you can't lick 'em, JOIN THEM!" Duke energy should get on the band wagon, go into business making solar panels with the new non-toxic types, create high demand jobs, set up fields of solar panels of their own, encourage businesses and homes to buy from them and go solar, and save themselves a lot of money down the road!

Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Jennifer Rao

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business.

Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

Laura Maddy

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Thank you.

Please do not weaken North Carolina's net metering standards. Especially now, in the wake of Duke Power's recent coal ash pond leaks. As a farmer in the NC mountains, I resent our local electric cooperative's lack of support for net metering, which is due to Duke Power's anti-net-metering stance. We have many barns here whose roofs could support solar panels, contributing back to the grid, thus reducing the use of polluting coal. I would encourage our state utility commission to think beyond the box, and imagine some possibilities for all of us citizens to contribute to the solution of cleaner energy for our beloved state, and include net metering in the plan.

Thank you.

Dear NC Utilities Commission,

I support solar energy and net metering in North Carolina. Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

John Ebert

Once again I find myself trying to inform our corporations and political leaders that we need to take care of our Divine Creator's gift to us! We must be good stewards of this Earth for our children, grandchildren and on and on.... I'm stunned that we continue to destroy vs growing in ingenuity, design and love of our home, peoples and fellow creatures that live with us.

Please oppose any attempt to undermine these policies.

Thank you.

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

Hope Janowitz

Dear NC Utilities Commission,

Ignore the bogus nonsense from this webform at the NC Conservation Network. As a non-solar panel owning customer, I should not have to subsidize Duke paying inflated rates for the electricity generated by homeowners wealthy enough to install solar panels.

Duke shouldn't have to pay more than the normal, wholesale rate for residentially generated solar power. In truth, they should have to pay even less than wholesale given the reliability issues vs. large scale solar facilities. Don't punish the rest of us that use electricity from Duke Progress to subsidize the "feel good" preening of those people that can afford to slap solar panels on their roofs.

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards.

Net metering drives private investment by giving property owners the option to generate their own electricity while receiving fair credit for the surplus electricity they provide to the grid. It also provides customer choice in a state with an otherwise monopolized energy market. Utilities companies should not be standing in the way of American ingenuity and customer choice to protect their old way of doing business. Our economy thrives on innovation, competition and choice.

Please oppose any attempt to undermine these policies.

Thank you.

Sincerely,

Audrey Davis

Subject: RE: Docket E-100 Sub 83

Dear NC Utilities Commission,

I support North Carolina's strong net metering policies. By encouraging private investment in clean energy, the state's existing policies support North Carolina's booming solar industry. Net metering reduces the need for expensive power plants and infrastructure, and drives local job creation and investment.

North Carolina's solar industry has helped our state rise to 2nd in the nation for added solar

capacity in 2013, and we should be helping to drive the solar industry's growth rather than standing in its way.

Please do not weaken North Carolina's net metering standards. Stick up for the consumers

Thank you.

Sincerely,

Jack Lausch

Dear NC Utilities Commission,

I'm writing to you today in support of net metering and solar energy. Fair net metering policies ensure that customers receive fair credit for their contribution of clean, renewable energy to the grid. It's critical to support a transition away from dirty fossil fuels that pollute the air and water, threaten the public health and contribute to climate change.

Please do not weaken North Carolina's net metering standards.

Thank you.

Sincerely,

John R. Dykers, Jr.
