We must not allow Duke to continue to use fossil fuels! It is time we used more solar and wind power! The future of our country and planet depend on us using more renewable energy now and not five years from now. Our children and future generations are counting on you doing the right thing and we must not let them down!

I agree with NC WARN's proposal of "Sharing Solar," under which all Duke Energy's customers can share in the costs and benefits of clean energy much like we currently pay for polluting power plants – through the electric rate system. Scores of organizations and businesses already support the proposal. In this climate emergency, we need immediate and workable changes.

To Whom It Concerns: It's well-accepted that utility-scale solar power (solar farms) is now less expensive than new gas- or nuclear-fueled power plants. New solar-plus-storage is becoming even cheaper and more reliable. "[Distributed Generation] resources, specifically rooftop and parking lot solar plus battery storage, reduces or eliminates the need for new, high-cost transmission capacity to deliver remote utility-scale solar power (pg. 35)." "Distributed solar and battery storage [e.g. on roofs, parking areas, vacant land] can be scaled up rapidly, is fully proven, has a short lead time, and provides maximum resiliency in extreme weather conditions (pg. 33)." NC has excellent solar installers to meet the challenge. Thank you.

For years and years and years Duke Energy has engaged in abusive and polluting policy. It is no longer 1950 and time for Duke to consider the repercussions of their practices. Stop the reliance on fossil fuels. Time to move on!

I stand with NC Warn in their effort to block Duke Energy's senseless, self-interested and mean-spirited efforts to delay and impede rational plans to move our region toward clean energy. Local solar panels and battery storage can more economically and safely meet the needs of the people of this state in a timely manner as compared to Duke's dirty and unproven plans. You are supposed to control Duke. Duke is not supposed to control the NC Utilities Commission. Do your job. Do not abrogate your responsibilities.

Duke Energy Power Failures. We have experienced six power failures in the last 2 months at the following address. 10311 Sycamore Road Norwood, NC 28128 It is totally unacceptable for Duke Energy to fail in its core mission to the citizens of NC. What can the NC Utilities Commission do about this?

Duke Energy keeps requesting rate increases to cover the costs of installing additional, fossil-fuel based generation capacity, while at the same time working to diminish and eliminate net-metering and other assistance for residential solar power generation. They are acting as though spewing carbon dioxide into our atmosphere has no consequences -- maybe they don't realize that right now -- IT IS UNUSUALLY HOT OUTSIDE! This strategy could be judged favorable in light of the approximately 3-fold higher costs for solar panel installation in residential versus utility scale settings -- if they were inclined to install the requisite solar farms with battery storage. However, Duke Energy could also request rate increases to help offset the costs to residential retail customers for solar panel installations on their property. NC Warn's proposed Sharing Solar program would do just that, and Duke Energy should jump at the opportunity to take advantage of their program.

I have read many comments submitted by capable and well- informed intervenors. It's clear that Duke rigs all the calculations and projections in favor of more big power plants that will have to be closed before the end of their useful lives. Please require a less risky approach — solar plus storage. The climate crisis demands it.

Duke Energy has slow-walked a transition to clean energy for years despite their advertising touting their "smart" energy. Their plans do not move NC toward a serious reduction of fossil fuel usage and do leave the same vulnerabilities for their customers, esp. in eastern NC. Isn't it time to try a different path, a serious usage of solar plus battery with financing via customer rates? Please don't give Duke Energy another pass.
