Subject: Solar energy docket E-100 sub 180CS

I am a homeowner who paid for rooftop solar myself. I am infuriated that Dominion continues to push fossil fuels use, and is making it harder to have private solar. Impediments to solar energy must stop!

Why are we making private solar energy harder? The IPCC report and the Global Oceanic Environmental Survey GOES report show that we are in a climate emergency, with this decade being the decisive factor.

I'm sure you are aware of these reports, and the effects on our world if we surpass 1.5 degree C or if the ocean ph goes to 7.9. Yet you continue to focus on burning fossil fuels for profit.

If you have children and grandchildren, consider what their world will be like in 10 or 20 years. Look at India and Pakistan now. No amount of money will help any of them survive.

Sincerely,

Amy Johnson
