NC Utilities Commission, Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work! Pamela Haddock

Please, please, do not allow, permit or enable Duke Energy to stand in the way of solutions to our energy needs. There are excellent pathways forward for sustainable, clean energy - Duke Energy offers POOR substitutes!

I strongly encourage Duke Energy to invest in renewable sources of energy in expanding its electrical generation capacity. Duke has not been a good citizen in recent years in matters of pollution and sustainability and they must be encouraged to do more to protect the environment

NC Utilities Commission, United Nations Secretary-General António Guterres said recently that world leaders must quickly find “an exit ramp off the highway to climate hell.” Despite the horrifying weather disasters pummeling human civilization this summer, Duke leaders plan to greatly expand their use of fossil fuels, gamble our future on high-risk and super-costly transmission and failed nuclear technologies, and suppress clean energy climate solutions. North Carolina is past due for a shift in the profit-driven monopoly mindset that increasingly harms communities, drives up power bills, and makes the climate crisis worse, and there is no chance of North Carolina helping avoid Guterres’ “climate hell” without a rapid and large expansion of local solar-plus-storage. Many experts agree that local solar-plus-storage is the best tool we have to address the climate crisis. It is clear that the only way North Carolina can finally get aligned with the climate scientists is to rapidly expand local solar. North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals, so let's put it to good use for the benefit of all. All Duke Energy's residential, commercial and nonprofit customers can share in the costs and benefits of local solar much like we currently pay for polluting power plants – through the electric rate system. It is past time for a genuine clean energy transition in North Carolina – not more false solutions. We need to get off the highway to climate hell more than Duke Energy needs to make more profit by exploiting North Carolinians and the planet. Lin Orndorf, Asheville, NC

NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions. Thanks for listening! Ginny Matsey
