Hi,

I am a parent, a scientist and a concerned citizen. Rooftop solar is a critical piece of saving ourselves from the potential ravages of climate change. In no way, shape or form should we be making it more difficult, more confusing, or less accessible for the average citizen. My husband I installed rooftop solar a decade ago, and are concerned both about the loss of equitable net metering AND the effect this will have towards moving this state towards net zero.

Duke Energy is clearly trying to hobble the growing solar industry in this state. Please reject their proposal.

Regards,
Rebecca Showalter
