I would think that it would be beneficial to everyone if we allowed home or small business solar and storage. This would help speed up the switch from fossil fuel power generation to clean energy and provide financial benefits to small customers. Of course that would go against what you and Duke energy would prefer, but isn't it your job to represent the people and not just businesses that line your pockets?

Message

I implore the NCUC to take a more long term strategic view on our electric utilities and the source of energy. The science is clear that we cannot continue to release CO2 and CH4 into the atmosphere, the path to achieving zero CO2 and CH4 emissions needs to start today with ending the building of any power source that emits CO2 or CH4 either directly or as part of the mining, drilling and long term well operations. There are near zero emission renewable solutions such as shared solar and battery storage that can easily exist at the point of energy use. Please stop allowing an energy infrastructure that is dictated by corporate greed, profits, kickbacks and do you job to drive away from environmentally negative solutions. To be clear, no more coal or natural gas power generation.

I support NC Warns "Sharing Solar" proposal. I know we can't do away with fossil fuel-generated energy overnight, but please give "rooftop" solar all the support you can. I'd like to see the \$1 billion surplus go to turning NC green.

Docket

E-100 Sub 190

Message

NC citizens need alternatives to fossil fuels, Duke Energy is not moving in that direction. We need to locate solar panels and storage batteries where power is used, particularly rooftops and parking areas, which will generate jobs in towns and cities across the state, add protections during emergencies, and help all customers avoid annual rate increases while reducing climate pollution instead of expanding fossil fuels. The proposal calls for prioritizing low-income customers.

To Whom It May Concern: Please reject Duke Energy's climate-wrecking plans and pursue climate solutions that work! Jim Warren, director of NC WARN said today at a press conference, "A key hindrance for expanding rooftop solar has long been the up-front cost. But NC electricity users don't pay a large up-front cost to build giant fossil fuel and nuclear power plants. We all share the cost of kilowatt-hours on our monthly power bills, and polls show that, overwhelmingly, North Carolinians and businesses would rather be buying clean power." I agree with the above statement and support clean energy. Do the right thing! Margaret Perez

As someone who invested in solar panels I am asking you to listen to people like myself who have skin in the game. People are NOT trying to get rich at the expense of my fellow citizens of NC. We know that the future is rooftop solar and programs to encourage it, not the self-serving lies put forth by Duke. We have MORE than enough roof area to solve our energy needs. Duke is just upset that they have not found a way to steal value from the process than they already have by charging up retail rates and paying us wholesale rates as we go forward.

Everything that can be done, should be done, to move North Carolina away from dirty fossil fuels to clean renewable sources of energy, particularly solar. It doesn't seem that Duke Energy is interested in doing this and they need some prodding to move them in that direction. The people of this state need this to happen sooner rather than later.
