Docket

E-100 Sub 190

Message

Dear NCUC, As you close public comment for Duke Energy's consolidated docket E-100 Sub 190, I urge you to put communities and the climate first. Communities living in the shadow of dirty power plants have already paid dearly for our reliance on energy sources that are not clean – suffering serious harms to their health, air, and water. To ensure a just transition, a carbon plan must acknowledge the role these facilities continue to play in communities across North Carolina and ensure their voices are heard in visioning a clean energy future. Building new gas infrastructure and increasing our reliance on fracked gas to generate electricity risks climate catastrophe due to fugitive methane, threatens to saddle ratepayers with billions in stranded costs, puts us at the mercy of gas price volatility, and requires destructive pipelines that may never be permitted. I urge Commissioners to agree to a final carbon plan that is in the public interest. Please put equity, clean energy, and a swift transition away from fossil fuels at the center of the North Carolina carbon plan.

E 100 Sub 190

Message

Duke energy is moving in the wrong direction. This is a narrow window in time to make better choices for the environment, and we must make other choices that we already have access to. Please be wise and take the long view to benefit life on this planet for our children and grandchildren and nature. Duke has not acted in ways that benefit the rivers, the air or land.

Docket

E-100 Sub 190

Message

Dear NCUC, I am submitting this comment regarding Duke Energy's consolidated docket E-100 Sub 190 to urge you to please put communities and the climate first. Communities living near power plants have already paid dearly for our reliance on fossil-based energy sources, suffering serious, direct harms to their health. To ensure a just transition, a carbon plan must acknowledge the role these facilities continue to play in communities across North Carolina. Building new gas infrastructure and increasing our reliance on fracked gas to generate electricity risks climate catastrophe due to fugitive methane, threatens to saddle ratepayers with billions in stranded costs, puts us at the mercy of gas price volatility, and requires pipelines which always pose a safety risk. I submit this comment to urge Commissioners to agree to a final carbon plan that is in the overall best public interest. Please put equity, clean energy, and a swift transition away from fossil fuels at the center of the North Carolina carbon plan. Thanks you for considering my comment.

Message

Dear Esteemed Members of the NC Utilities Commission, Please hold Duke Energy accountable to the health and welfare of current and future generations of North Carolinians by holding the line on the original targets of HB951. Corruption and greed must be reigned in for the common good not only our great state but the entire nation and world! Enough is enough--these are clearly not ordinary times and business as usual is not a viable option! May each and all of you have the moral courage to stand for the common good. Sincerely, Denise Frizzell

Please don't allow Duke Energy to keep relying on fossil fuel energy sources when there are energy sources they could use that don't harm our health, air, and water. Do not allow them to build new gas infrastructure and rely on fracked gas to generate electricity. Please don't agree to a final carbon plan that results in climate catastrophe. That does not align with the public interest you are tasked with protecting. Thank you for protecting us.

I urge you to put communities and the climate first. As a citizen of neighbor South Carolina who has family in NC, and who experiences the impact of Duke's energy policies downwind and down-water from its NC operations, I vehemently oppose more fossil fuel infrastructure. Communities living in the shadow of dirty power plants have already paid dearly for our reliance on energy sources that are not clean – suffering serious harms to their health, air, and water. To ensure a just transition, a carbon plan must acknowledge the role these facilities continue to play in communities across North Carolina and ensure their voices are heard in visioning a clean energy future. Building new gas infrastructure and increasing our reliance on fracked gas to generate electricity risks climate catastrophe due to fugitive methane, threatens to saddle ratepayers with billions in stranded costs, puts us at the mercy of gas price volatility, and requires destructive pipelines that may never be permitted.
