Local "solar plus storage", distributed solar and battery storage, is the fastest, cheapest and fairest way to meet our climate goals. Duke Energy's fossil fuel and nuclear energy sourced power will devastate North Carolina's human and environmental health and society as a whole. The Utilities Commission should not approve Duke Energy's toxic energy plan that will be catastrophic for all involved. Sincerely, Glenn Temple

NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions.

NC Utilities Commission, North Carolina is past due for a shift in the profit-driven monopoly mindset that increasingly harms communities, drives up power bills, and makes the climate crisis worse. Many experts agree that local solar-plus-storage is the best tool we have to address the climate crisis. It is clear that the only way North Carolina can finally get aligned with the climate scientists is to rapidly expand local solar. All Duke Energy's residential, commercial and nonprofit customers can share in the costs and benefits of local solar much like we currently pay for polluting power plants – through the electric rate system.

North Carolina Utilities Commission, North Carolina's reliance on a profit-driven utility monopoly is exacerbating the climate crisis, burdening residents with escalating energy costs, and undermining community well-being. To align with the urgent recommendations of climate scientists, the state must rapidly expand local solar energy paired with storage. This approach offers a proven solution to mitigate climate change. Similar to the current system of funding polluting power plants, all Duke Energy customers — residential, commercial, and nonprofit — should equitably share the costs and benefits of local solar through adjustments to electricity rates.

We need more solar panels and storage solutions instead of Duke's plans to use fossil fuels and restrict residential access to solar power. We have power outages all during the summer in my country neighborhood. Solar stations located throughout counties could alleviate this monopoly's stranglehold on electricity through their power grid. While they have the money to put some electricity lines underground, they prefer to let their CEO make millions while we go without electricity when power lines fail during a storm or during other random outages. Not only do we need solar as a remedy to power outages, we need solar to offset the carbon and methane emissions that are raising temperatures.

My power bill is 2 x what it was last year. Duke should not be allowed to make gas plants and nuclear plants. Only solar plants. We have plenty of sun in NC. don't let them dictate their power plan.
