I currently have invested thousands in an 8Kw residential solar array and added a 50Kw array to my business. If Duke Energy is allowed to change net metering resulting in a decrease in what they pay for excess energy going to the grid, ANYONE can see the dramatic reduction in residential and business solar expansion in North Carolina. Personally I plan to expand my residential array but only if the current net metering price stays the same. I ask you to oppose any changes to net metering for the sake of future rooftop solar growth in North Carolina.

Utilities Commission:

E100 SUB 83

My husband and I purchased a rooftop solar system last spring in an effort to leave a smaller carbon footprint and make a sound investment for our home. I understand the Utilities Commission is considering changing net metering which would have a serious impact on the energy our panels produce, discourage other citizens from making changes that have a positive effect on the environment and, in my opinion, violate the terms of the agreement we entered in good faith with Progress/Duke Energy. Please oppose changes in net metering, as it have a negative impact on the State of North Carolina and its citizens. We are vehemently opposed to these changes.

Thank you for your consideration, Karen Chamberlain

**Clerk's Office
N.C. Utilities Commission**

Dear Chief Clerk of the North Carolina Utilities Commission,

My name is Brian Bellis and I live at 301 Jarvis Circle in Wilmington NC. In the latter part of 2012 I purchased a roof top photovoltaic system for my home, mainly because I am a supporter of sustainable clean energy and because I have a south facing roof which is well suited for solar energy generation. Another reason I purchased the system was the monetary incentives offered by the state and federal governments to do so, and because the power company (Progress Energy at the time and now Duke Energy) offered net metering as a way of paying me for the electricity my photovoltaic system puts into the power grid.

I am very happy with my system but I am dissappointed to learn that the commission is considering changing the net metering program for the worse, or to reduce the incentives for people or businesses to pursue solar energy opportunities. I urge the commission to consider and expand upon the many advantages of clean sustainable and renewable energy sources as part of the total energy supply for the citizens of North Carolina, and to not change the net metering program in a way that would undermine this objective.

Sincerely,

Brian Bellis
