Commission Members –

I strongly urge you to deny Duke Energy's proposed changes to net-metering rules! You have recently received evidence that Duke Energy's analyses significantly undervalue rooftop solar electric energy under future scenarios of rising fuel costs and requirements to reduce carbon emissions. As an experienced solar professional for over 40 years, it is my opinion that everyone benefits from increased deployment of solar PV systems, including Duke Energy and all of its customers.

Regards,

E. Thomas Henkel, Ph.D
