Clerk's Office
N.C. Utilities Commission

I am contacting you regarding case record: Docket No. E-100, SUB 141.

I recently became aware that Duke Energy once again is proposing an action which not only endangers the health of its customers, but also "fines" customers who do not comply with their plans. I am referring to Duke Energy's plan to install smart meters. Smart Meters have been the subject of investigations because of a variety of health problems associated with them such as the World Health Organization, EPA, National Science Foundation, and others.

Please do your homework and explore the scientific literature related to the electro-magnetic consequences of Smart Meters on peoples' health. If you will do that, you will recognize that you have an ethical and moral responsibility to OPPOSE Duke Energy's plan.

To "add insult to injury" or health consequences, Duke Energy also proposes to fine individuals who to protect their own and their family's health opt-out of the Smart Meters.

PLEASE OPPOSE Duke Energy's plan. There are options to Duke Energy's plan for Smart Meters. Make them do their homework and return to the Utilities Commission with a safe plan.

Thank you for your attention.
