Smart Meter? It is for Duke energy. I have carefully monitored my electric use by watching my meter since I moved to Henderson county, it's what I do. It has been consistant, 5-6 kw useage since April when we closed up the house. After Duke energy "forced" this new smart meter on me on 5/18 I noticed immediately the electric charge more than doubled!!!! Every day magicly I am somehow using twice what I used to by doing the exact same thing! No its not something running or a "drain" of an appliance. It's Dukē's new smart meter stealing from its customers. I read some of the consumers complaints(over 250,000 this year) for NC and the claim is obvious and unanimous. I called Duke and asked for a tech to come and check the meter and was told there was nothing they can do by a very rude woman!!!!!! Really? I called back and asked for the technical help department and was told they would check it out, no one has come to do that and the meter continues to steal. This is obviously a joint effort for Duke and many others associated and working with to make billions of dollars at the customers expense and I will do whatever I can to fight it. I am the most energy consevative minded person I know and I truly practice and put to use extreme conservation methods to reduce waste of any and all energy resources. To try so hard on a daily basis to save energy and then have a thief like Duke energy come and disrupt and discredit my effort is criminal and frustrating. I know this is not the only letter like this but I want the commision and everyone else to know, the anger is building and so is the opposition to being bullied around by big corporations who hide behind politics and payoffs to protect themselves. Investigate this smart meter scam and get results for the millions of people who actually and sincerely try to make a difference...
